Historic Landscapes Project

What is the Project?

The Planning Division has contracted Landmark Design, Inc. to prepare histories, inventories and the development of design guidelines as needed for certain parks, park strips, cemeteries, golf courses, and other historic open spaces that have historic features or are historic landscapes. Typically properties are mapped, photographed and documented.

Historic Landscape are a geographic area, including both cultural and natural resources associated with a historic event, activity, or person or exhibiting other cultural or aesthetic values.

Why make the Change?

This project is intended to provide information needed to make informed decisions on design, maintenance, or other use changes that may occur in the future.
