

## 1300 East Waterline Replacement and Sewer Rehabilitation Project

*A water replacement and sewer rehabilitation project along 1300 East from 1300 South to 2100 South is scheduled to begin in spring 2018, complete by winter 2018.*

### 1300 East Waterline Replacement and Sewer Rehabilitation Project Quick Facts

- What:** Waterline replacement will replace the two waterlines in 1300 East. The new pipes will provide more capacity and increased reliability throughout the area. Sewer rehabilitation construction will take place to repair the sewer system. Impact of the project will be minimized using a method known as "cured-in-place pipe," reducing the amount of excavation.
- Where:** 1300 East from 1300 South to 2100 South
- When:** Spring to winter 2018
- Why:** Salt Lake City is making improvements to the existing infrastructure and rehabilitating the water and sewer systems to maintain service in the area.

### Businesses/Residents Should Expect:

- Notification prior to road closures
- Continued water and sewer services – minimal interruptions are anticipated
- Maintained access to businesses and residences with only brief interruptions
- Some parking restrictions
- Open pits for waterline replacement along 1300 East
- Plated access over trenches to businesses and residences.

### Project Benefits Include:

- Increased capacity and reliability for the culinary water system
- Cured-in-place pipe repair expediting the construction schedule compared to full pipe replacement
- Extending the life of the sewer line while repairing existing defects
