

SALT LAKE CITY Council District 6

DEC
2018

Hello Neighbors,

This year, my colleagues and I brought years of careful effort and deliberate groundwork together in a series of measures that will add funding to road maintenance, increase transit options and reduce the burden on roads and other infrastructure. We also worked on measures to create density and housing options close to jobs and amenities.

As the City continues to develop and densify at its urban core and in other communities, the usage and demand for District Six facilities increases. New funding for roads, as well as measures to support housing, transit and density close to jobs, helps alleviate the stress east bench neighborhoods experience when demand for our major corridors and other assets increases.

Harnessing the resources of the entire City to help pave the way for resilient and equitable improvements in coming years has been a key Council priority and is significantly reflected in this year's accomplishments.

The Council also worked closely with State legislators and other officials to broker effective and more equitable policy on the upcoming development of the City's Northwest Quadrant, which is planned to include construction and operation of an inland port facility. Boosting funding for housing, transit and critical infrastructure both throughout Salt Lake and targeted where growth and new jobs can most effectively be accommodated was a key element of these negotiations.

Thank you for another great year, District Six.

THANK YOU FOR APPROVING THE STREETS RECONSTRUCTION BOND

During the 2018 General Election, Salt Lake City voters approved the \$87 million Streets Reconstruction Bond. This new dedicated funding will allow the City to begin addressing our most deteriorating streets and, when paired with new sales tax revenue for streets maintenance, prolong the life of our entire street network. As part of the Funding Our Future initiative, City leaders have committed to ensuring accountability in spending and will continue to provide residents with updates on streets reconstruction and maintenance projects as they progress.

What's next for the Streets Reconstruction Bond?

- Funding will be issued as several smaller bonds, totaling no more than \$87 million
- The first bond of approximately \$20 million will be issued in 2019 or 2020 – whichever provides the City's Engineering Division with the maximum amount of time to efficiently spend funding within the required 3-year period
- The first bond-funded street reconstruction projects are expected to begin design in 2019 and construction in 2020
