10/29/2021 18:22	Mark Baer	Council, I did leave a previous email but simply wish to emphasize at this point my increasing understanding of the need to lessen light pollution for the health of our community (people!) to say nothing of the rest of the co-habitants of this place. You've probably seen this, but just in case, this is a wonderful (local!) production and I hope it helps sway you to approve both the minimum lighting (lumens) necessary but also to make sure that all lighting is directed downward toward it's target and not allow to haphazardly diffuse into the night skies. Thank you, Mark W. Baer Avenues, SLC, Utah	Street Lighting Master Plan

11/1/2021 14:46	Susan Dawson	Mayor Mendenhall Councilman Wharton While I realize these comments are later than you would hope, I would appreciate your consideration as timely responses in this inefficient era are not always possible. 1. Sometime ago Salt Lake City invested significant funds to change out most of the street lights and directing the light downward, effectively darkening the skies to the benefits of everyone in the city. Now it plans to destroy this benefit for everyone by using high color lights in the Avenues. Why would Salt Lake City sabotage its own success? 2. At the very least reconsider the light temperature. A maximum of 2200K is appropriate for neighborhoods and better for the ecosystem. Warm light temperatures have been shown to interfere with sleep cycles and disruptive sleep is destructive to health. Why would Salt Lake City undermine the health of its residents? 3. Additionally the Great Salt Lake it a critical stopping point for most north-south bird migration in this hemisphere. Warm light temperatures have been shown to disrupt bird migration. The bird migration is critical to the world and important to tourism in Salt Lake City. Why would Salt Lake City undermine its reputation with such an ecologically irresponsible (and frankly frivolous) plan? Please follow the Dark Skies / IES lighting principles. Respectfully, Susan Dawson	Street Lighting Master Plan
11/2/2021 13:16	Pete Choles	please conduct a full evaluation and environmental impact study on the new construction of trails in city creek canyon and above the avenues. thank you. peter choles	Foothills Trail System Master Plan

11/2/2021 13:17	Maria Goller	Dear City Council, I am emailing you to voice concern about Salt Lake City's current Foothills Trails System Plan. I am against the creation of new trails in the Foothills area around Salt Lake City. Instead, I hope SLC will conduct a thorough inventory of existing trails in these areas. Growing up in Salt Lake, I spent many hours exploring the many trails crisscrossing the Foothills. Today, these trails are still in place. I believe the Plan should be to improve and maintain existing trails rather than adding even more to this highly-trafficked area. As an avid hiker and trained ecologist, I despise the new trail system for many reasons, not least of which because they often run alongside pre-existing trails. I hope you will do the right thing and not allow further damage to our beloved Foothills. Thank you. Sincerely, Maria Goller Ph.D. Ecology & Animal Behavior	Foothills Trail System Master Plan
