

MOTION SHEET

CITY COUNCIL of SALT LAKE CITY

TO: City Council Members

FROM: Ben Luedtke

Budget & Policy Analyst

DATE: September 15, 2020

RE: Transportation Update to Impact Fees Facilities Plan

MOTION 1 - CLOSE PUBLIC HEARING AND ADOPT

I move that the Council close the public hearing and adopt an ordinance updating the Impact Fees Facilities Plan for transportation services and amend the Consolidated Fee Schedule.

MOTION 2 - CLOSE PUBLIC HEARING

I move that the Council close the public hearing and refer the item to a future date for action.

MOTION 3 – CONTINUE PUBLIC HEARING

I move that the Council continue the public hearing to a future date.

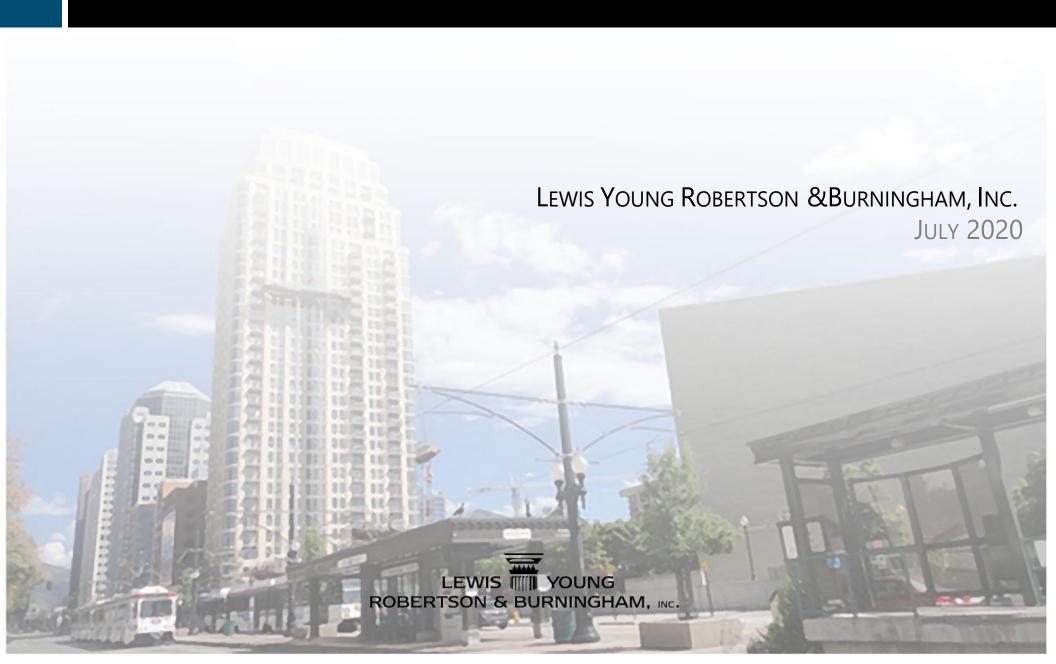

MOTION 4 - CLOSE PUBLIC HEARING AND NOT ADOPT

I move that the Council close the public hearing and proceed to the next agenda item.

DRAFT TRANSPORTATION IFFP & IFA DISCUSSION

SALT LAKE CITY, UTAH

INTRODUCTION TO IMPACT FEES

Before imposing an impact fee, each local political subdivision or private entity shall prepare:

IMPACT FEE FACILITIES PLAN (IFFP)

Identifies the demands placed upon the City's existing facilities by future development and evaluates how these demands will be met by the City. Outlines the improvements which are intended to be funded by impact fees.

IMPACT FEE ANALYSIS (IFA)

Proportionately allocates the cost of the new facilities and any excess capacity to new development, while ensuring that all methods of financing are considered.

SLC RECENT IMPACT FEE HISTORY

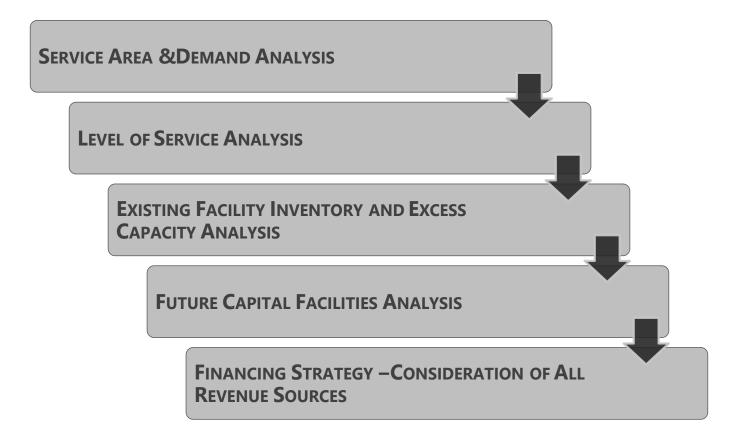

- 2012: Impact Fee Facilities Plan and Impact Fee Study was Completed
- 2014: Changes to the Impact Fees and Service Area were Addressed
- 2016: Impact Fee Facilities Plan and Impact Fee Update was Completed
- 2020: Transportation IFFP & IFA Review

IMPACT FEE PROCESS

The following elements are important considerations when completing an IFFP and IFA:

TRANSPORTATION UPDATE

Service Area

 The Service Area for the transportation impact fees includes all areas within the City.

Demand

The demand units utilized in this analysis include residential and non-residential development and the existing and projected trips anticipated from new development (PM peak hour vehicle trips generated between the hours of 4-6pm).

Level of Service

This total existing system value in relation to the 2019 PM peak hour vehicle trips (which amount to 365,663) sets the current LOS cost per trip at \$1,419 per trip, which is higher than the proposed cost per trip identified in this analysis.

TRANSPORTATION UPDATE

Excess Capacity

 Approximately 11 percent of the existing system, or \$12,663,158, is applicable to new growth.

Outstanding Debt

This analysis includes debt and interest costs related to bonding issued for the construction of transportation facilities. The City issued the Series 2012A Sales Tax Revenue Bonds and the Series 2014 Motor Fuel Bonds to finance the construction and improvement of various City roads and infrastructure.

Future Facilities

 A total of \$12,675,000 of impact fee eligible future facilities is included in the proportionate share analysis.

Financing

No new debt is included in this analysis.

TRANSPORTATION UPDATE

Proportionate Share Analysis:

| | Valuation | % TO GROWTH | IMPACT FEE ALLOCATION | TRIPS | COST PER TRIP |
|----------------------------|-------------------|----------------|-----------------------|--------|---------------|
| Buy-In | \$115,576,169 | 11% | \$12,663,158 | 52,838 | \$240 |
| Future Facilities | \$157,664,768 | 8% | \$12,675,000 | 52,838 | \$240 |
| Impact Fee Fund Balance | (\$2,515,087) | 100% | (\$2,515,087) | 52,838 | (\$48) |
| Professional Expense | \$29,476 | 100% | \$29,476 | 52,838 | \$1 |
| Total | \$270,755,32 6 | | \$22,852,547 | | \$433 |

The impact fee by land use type is illustrated in the IFA report.

NEXT STEPS

1. Finalize IFFP and IFA based on Council Recommendations

- 2. Stakeholder Meetings
- 3. Prepare Final IFFP, IFA and Ordinance
- 4. Fulfill Noticing Requirement
- 5. Hold Public Hearing
- 6. Adopt, Modify or Reject Proposed Impact Fees
- 7. 90 Day Wait Period for Any Increase

SUBJECT: Transportation Impact Fees Facilities Plan (IFFP) Final Plan and Ordinance

STAFF CONTACT: Dan Rip, Policy and Program Manager,

daniel.rip@slcgov.com, ext. 6308

DOCUMENT TYPE: Information Only

RECOMMENDATION: Adopt Transportation IFFP ordinance

BUDGET IMPACT: None

BACKGROUND/DISCUSSION: Upon completion of briefing the City Council and reviewing the draft Transportation IFFP, without any feedback for changes to the plan, the Administration is ready to submit public notice for the up-and-coming public hearing on the Transportation IFFP in September 2020.

Attached is the Ordinance and applicable Exhibit to be adopted upon completion of the public hearing and pending approval of the Transportation IFFP.

PUBLIC PROCESS: Public hearing scheduled by City Council to be held in September 2020.

EXHIBITS:

Attachment A – Final Transportation IFFP

Attachment B - Ordinance for Adoption of updated Impact Fee Facilities Plan for Transportation Services and Amendment to Consolidated Fee Schedule.

IMPACT FEE CERTIFICATION

IFFP CERTIFICATION

Lewis Young Robertson & Burningham, Inc. and Salt Lake City jointly certify that the Impact Fee Facilities Plan ("IFFP") prepared for transportation services:

- 1. includes only the costs of public facilities that are:
 - a. allowed under the Impact Fees Act; and
 - b. actually incurred; or
 - c. projected to be incurred or encumbered within six years after the day on which each impact fee is paid;
- does not include:
 - a. costs of operation and maintenance of public facilities;
 - b. costs for qualifying public facilities that will raise the level of service for the facilities, through impact fees, above the level of service that is supported by existing residents;
 - c. an expense for overhead, unless the expense is calculated pursuant to a methodology that is consistent with generally accepted cost accounting practices and the methodological standards set forth by the federal Office of Management and Budget for federal grant reimbursement; and
- 3. complies in each and every relevant respect with the Impact Fees Act.

LEWIS YOUNG ROBERTSON & BURNINGHAM, INC. SALT LAKE CITY

IFA CERTIFICATION

Lewis Young Robertson & Burningham, Inc. certifies that the Impact Fee Analysis ("IFA") prepared for transportation services:

- 1. includes only the costs of public facilities that are:
 - a. allowed under the Impact Fees Act; and
 - b. actually incurred; or
 - c. projected to be incurred or encumbered within six years after the day on which each impact fee is paid;
- 2. does not include:
 - a. costs of operation and maintenance of public facilities;
 - b. costs for qualifying public facilities that will raise the level of service for the facilities, through impact fees, above the level of service that is supported by existing residents;
 - an expense for overhead, unless the expense is calculated pursuant to a methodology that is consistent with generally accepted cost accounting practices and the methodological standards set forth by the federal Office of Management and Budget for federal grant reimbursement;
 - d. offsets costs with grants or other alternate sources of payment; and
- 3. complies in each and every relevant respect with the Impact Fees Act.

Lewis Young Robertson & Burningham, Inc. makes this certification with the following caveats:

- 1. All of the recommendations for implementation of the IFFP made in the IFFP documents or in the IFA documents are followed by City Staff and elected officials.
- 2. If all or a portion of the IFFP or IFA are modified or amended, this certification is no longer valid.
- 3. All information provided to LYRB is assumed to be correct, complete, and accurate. This includes information provided by the City as well as outside sources.

LEWIS YOUNG ROBERTSON & BURNINGHAM, INC.

SECTION 1: EXECUTIVE SUMMARY

The purpose of this Impact Fee Facilities Plan ("IFFP"), with supporting Impact Fee Analysis ("IFA"), is to fulfill the requirements established in Utah Code Title 11 Chapter 36a, the "Impact Fees Act," and help Salt Lake City (the "City") fund necessary capital improvements for future growth. This document will address the future transportation infrastructure needed to serve the City through the next ten years, as well as the appropriate impact fees the City may charge to new growth to maintain the level of service ("LOS").

- Impact Fee Service Area: The Service Area for the transportation impact fees includes all areas within the City. FIGURE 3.1 illustrates the proposed Service Area. This document identifies the necessary future system improvements for the Service Area that will maintain the existing LOS into the future.
- **Demand Analysis:** The demand units utilized in this analysis include residential and non-residential development and the existing and projected trips anticipated from new development. As new development and redevelopment occurs within the City, it generates increased demand on City infrastructure. The system improvements identified in this study are designed to maintain the existing LOS for any new or redeveloped property within the City.
- **Level of Service:** The existing LOS is defined in **Section 4** of this document. Through the inventory of existing facilities, combined with the growth assumptions, this analysis identifies the LOS, which is provided to existing residents and ensures that future facilities maintain these standards. Any excess capacity identified within existing facilities can be apportioned to new development.
- **Excess Capacity:** The demand analysis, existing facility inventory and LOS analysis allow for the development of a list of capital facilities necessary to serve new growth and to maintain the existing system. This list includes any excess capacity of existing facilities, as well as future system improvements necessary to maintain the LOS. The inclusion of excess capacity is known as a "buy-in." Any demand generated from new development that overburdens the existing system beyond the existing capacity justifies the construction of new facilities.
- The City has several outstanding bonds. This analysis includes debt and interest costs related to bonding issued for the construction of transportation facilities. The City issued the Series 2012A Sales Tax Revenue Bonds and the Series 2014 Motor Fuel Bonds to finance the construction and improvement of various City roads and infrastructure. The interest associated with these bonds is included in the determination of existing system valuation.
- **Capital Facilities Analysis:** Due to the projected redevelopment within the City, additional capital improvements will be necessary related to transportation infrastructure.
- Funding of Future Facilities: This analysis assumes future growth-related facilities will be funded through a combination of General Fund revenues, other governmental revenues and impact fee revenues. Where applicable, only the portion of future projects intended to be funded by the City are included in this analysis.

SUMMARY OF PROPOSED GENERAL FUND IMPACT FEES

The impact fees proposed in this analysis will be assessed within the entire Service Area. The table below illustrates the calculated impact fee for transportation by land-use category.

TABLE 1.1: IMPACT FEE SUMMARY BY GENERAL LAND USE

| LAND USE GROUP | ITE CODE | ITE LAND USE CATEGORY | PM PEAK VEHICLE TRIP RATE ¹ | PASS BY ADJUSTMENT | NET NEW TRIPS | Unit of Measure | FEE PER UNIT LAND USE |
|------------------|-------------|--------------------------------------|--|-----------------------|------------------|--------------------|--------------------------|
| | 110 | Light Industrial | 0.63 | 0% | 0.63 | 1,000 sq ft | \$273 |
| | 30 | Intermodal Truck Terminal | 1.97 | 0% | 1.97 | 1,000 sq ft | \$853 |
| Industrial | 130 | Industrial Park | 0.40 | 0% | 0.40 | 1,000 sq ft | \$173 |
| | 140 | Manufacturing | 0.67 | 0% | 0.67 | 1,000 sq ft | \$290 |
| | 150 | Warehouse | 0.19 | 0% | 0.19 | 1,000 sq ft | \$82 |
| | 210 | Single family house | 0.99 | 0% | 0.99 | dwelling | \$429 |
| Desidential | 220 | Multifamily Housing (Low-Rise) | 0.56 | 0% | 0.56 | dwelling | \$242 |
| Residential | 221 | Multifamily Housing (Mid-Rise) | 0.44 | 0% | 0.44 | dwelling | \$191 |
| | 222 | Multifamily Housing (High-Rise) | 0.36 | 0% | 0.36 | dwelling | \$156 |
| Mix Use Comm/Res | 231 | 1st Floor Commercial; Mid-Rise Apts. | 0.36 | 0% | 0.36 | dwelling | \$156 |
| MIX USE COMMINES | 232 | 1st Floor Commercial; Mid-Rise Apts. | 0.31 | 0% | 0.31 | dwelling | \$134 |
| Hatal | 310 | Hotel | 0.60 | 0% | 0.60 | room | \$260 |
| Hotel | 320 | Motel | 0.38 | 0% | 0.38 | room | \$165 |
| Pograption | 444 | Movie Theater | 0.09 | 0% | 0.09 | seat | \$39 |

| | 945 | Gas Station w/convenience | 13.99 | 56% | 6.16 | pump | \$2,665 |

^{1.} ITE Trip Generation 10th Edition: 4-6 PM Peak Hour Vehicle Trip Generation Rates for the Adjacent Street Traffic (weekday 4-6PM); This Table represents only the most common uses and is NOTall-inclusive.

Land uses not identified in **TABLES 1.1** will be calculated based on the non-standard impact fee formula using the most recent Institute of Traffic Engineers (ITE) Trip Generation Manual for peak hour vehicle trip generation rates for the adjacent street traffic (weekday 4-6PM). For special situations and land uses not included in the table above, refer to Non-Standard Impact Fees.

Non-Standard Impact Fees

The City reserves the right under the Impact Fees Act¹ to assess an adjusted fee that more closely matches the true impact that a specific land use will have upon the City's transportation system. This adjustment could result in a different impact fee if evidence suggests a particular user will create a different impact than what is standard for its category. The City may also decrease the impact fee if the developer can provide documentation, evidence, or other credible analysis that the proposed impact will be lower than what is proposed in this analysis.

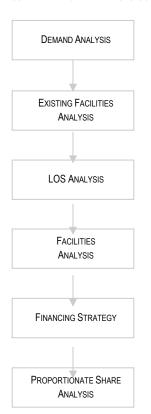

FORMULA FOR NON-STANDARD TRANSPORTATION IMPACT FEES:

Total Units x Estimate of PM Peak Hour Trips per Unit x Adjustment Factor x \$433 = Impact Fee per Unit

¹11-36a-402(1)(c)

SECTION 2: GENERAL IMPACT FEE METHODOLOGY

FIGURE 2.1: IMPACT FEEMETHODOLOGY

The purpose of this study is to fulfill the requirements of the Impact Fees Act regarding the establishment of an IFFP and IFA. The IFFP identifies the demands placed upon the City's existing facilities by future development and evaluate how these demands will be met by the City. The IFFP is also intended to outline the improvements, which are intended to be funded by impact fees. The purpose of IFA is to allocate the cost of the new facilities and any excess capacity to new development, while ensuring that all methods of financing are considered. The Impact Fee Act requires that the IFFP and IFA consider the historic LOS provided to existing development and ensure that the proposed impact fees maintain the existing LOS. The following elements are important considerations when completing an IFFP and IFA.

DEMAND ANALYSIS

The demand analysis serves as the foundation for the IFFP. This element focuses on a specific demand unit related to each public service – the existing demand on public facilities and the future demand as a result of new development that will affect system facilities.

EXISTING FACILITY INVENTORY

In order to quantify the demands placed upon existing public facilities by new development activity, to the extent possible the IFFP provides an inventory of the City's existing system facilities. The inventory valuation should include the original construction cost and estimated useful life of each facility. The inventory of existing facilities is important to determine the excess capacity of existing facilities and the utilization of excess capacity by new development.

LEVEL OF SERVICE ANALYSIS

"Level of service" means the defined performance standard or unit of demand for each capital component of a public facility within a service area. Through the inventory of existing facilities, combined with the growth assumptions, this analysis identifies the existing LOS that is provided to a community's existing residents and ensures that future facilities maintain these standards.

EXCESS CAPACITY AND FUTURE CAPITAL FACILITIES ANALYSIS

The demand analysis, existing facility inventory and LOS analysis allow for the development of a list of capital projects necessary to serve new growth and to maintain the existing system. This list includes any excess capacity of existing facilities as well as future system improvements necessary to maintain the LOS. Any excess capacity identified within existing facilities can be apportioned to new development. Any demand generated from new development that overburdens the existing system beyond the existing capacity justifies the construction of new facilities.

FINANCING STRATEGY

This analysis must also include a consideration of all revenue sources, including impact fees, future debt costs, alternative funding sources and the dedication of system improvements, which may be used to finance system improvements. In conjunction with this revenue analysis, there must be a determination that impact fees are necessary to achieve an equitable allocation of the costs of the new facilities between the new and existing users.

PROPORTIONATE SHARE ANALYSIS

The written impact fee analysis is required under the Impact Fees Act and must identify the impacts placed on the facilities by development activity and how these impacts are reasonably related to the new development. The written impact fee analysis must include a proportionate share analysis, clearly detailing each cost component and the methodology used to calculate each impact fee. A local political subdivision or private entity may only impose impact fees on development activities when its plan for financing

² 11-36a-302(2)

³ 11-36a-302(3)

system improvements establishes that impact fees are necessary to achieve an equitable allocation of the costs borne in the past and to be borne in the future (UCA 11-36a-302).

IMPACT FEE METHODOLOGIES

There are two methods employed in this analysis to determine the maximum allowable impact fees: the Growth-Driven Approach or the Plan Based Approach.

GROWTH-DRIVEN (PERPETUATION OF EXISTING LOS)

The growth-driven method utilizes the existing LOS and perpetuates that LOS into the future. Impact fees are then calculated to provide sufficient funds for the entity to expand or provide additional facilities, as growth occurs within the community. Under this methodology, impact fees are calculated to ensure new development provides sufficient investment to maintain the current LOS standards in the community. This approach is often used for public facilities that are not governed by specific capacity limitations and do not need to be built before development occurs (i.e. park facilities).

NEW FACILITY - PLAN BASED (FEE BASED ON DEFINED CIP)

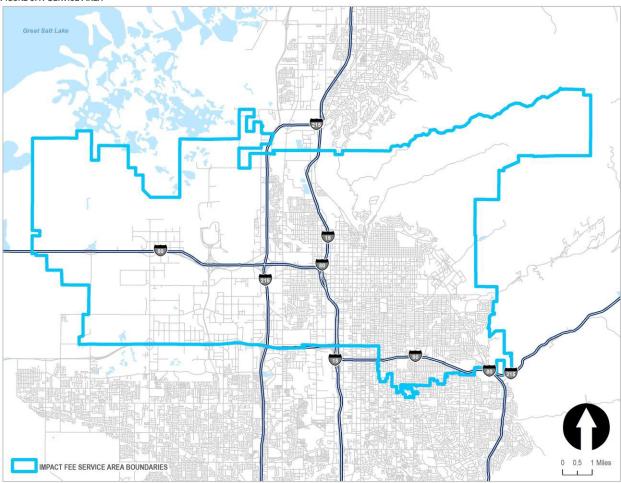

Impact fees can be calculated based on a defined set of capital costs specified for future development. The improvements are identified in a capital plan or impact fee facilities plan as growth-related system improvements. The total cost is divided by the total demand units the improvements are designed to serve. Under this methodology, it is important to identify the existing LOS and determine any excess capacity in existing facilities that could serve new growth. Impact fees are then calculated based on many variables centered on proportionality and LOS.

SECTION 3: OVERVIEW OF SERVICE AREA AND GENERAL DEMAND FIGURES

SERVICE AREAS

Utah Code requires the impact fee enactment to establish one or more service areas within which impact fees will be imposed.⁴ The Service Area for the transportation impact fee includes all areas within the current municipal boundaries of the City, as shown in **Figure 3.1**. This document identifies the necessary future system improvements for the Service Area that will maintain the existing LOS into the future.

FIGURE 3.1: SERVICE AREA

DEMAND ANALYSIS: EXISTING CONDITIONS

The demand units utilized in this analysis include development square feet (SF) and trip generation statistics. As new development and redevelopment occurs within the City, it generates increased demand on City infrastructure. The system improvements identified in this study are designed to maintain the existing LOS for any new or redeveloped property within the City.

TABLES 3.1 – 3.4 identify the existing development conditions within the City, as well as the anticipated new development forecasted to occur within the IFFP planning horizon.

TABLE 3.1: EXISTING LAND USE DATA

| Түре | SQUARE FEET | ACRES | MARKET VALUE | ASSESSED VALUE | |
|-------------|-------------|-------|------------------|------------------|--|
| Residential | 135,873,077 | 9,843 | \$22,446,992,010 | \$12,075,661,079 | |
| Commercial | 35,681,878 | 6,304 | \$4,017,957,350 | \$3,701,563,417 | |
| Office | 37,844,918 | 2,490 | \$5,145,913,580 | \$4,226,929,516 | |

⁴ UC 11-36a-402(1)(a)

| Түре | SQUARE FEET | SQUARE FEET ACRES MARKET V. | | Assessed Value |
|----------------------------|-------------|-----------------------------|------------------|------------------|
| Industrial | 78,422,267 | 3,389 | \$5,360,469,040 | \$5,161,542,049 |
| Vacant | 4,082,573 | 3,879 | \$856,660,270 | \$593,857,967 |
| Agricultural/Forest/Mining | 1,067,450 | 8,431 | \$266,813,870 | \$49,829,215 |
| Other | 43,239,444 | 22,267 | \$10,231,086,390 | \$569,132,134 |
| Total | 336,211,607 | 56,603 | \$48,325,892,510 | \$26,378,515,377 |

Existing parcel data indicates the majority of assessed value and building square footage is attributed to residential development. A total of 336,211,607 building square feet and \$48,325,892,510 of assessed market value exist within the City as shown in **TABLE 3.1**. The 2010 estimated population figure for the City was 186,806. The current population is estimated using building permit data (**TABLE 3.2**) from 2000 through 2019. The existing population is estimated at 207,311. For the purposes of determining impact fee demand, this analysis does not consider vacancy rates. The impact fee demand considers all development for which a building permit is issued.

TABLE 3.2: BUILDING PERMIT DATA

| YEAR | SINGLE- FAMILY | MOBILE/MANUF./ CABIN | DUPLEX/TWIN HOME | MULTI- FAMILY/CONDO | TOTAL DWELLING UNITS | INCREMENTAL POPULATION | CUMULATIVE TOTAL | % GROWTH POPULATION |

| 2013 | 14 | - | - | 24 | 38 | 89 | 187,980 | 0.05% |
| 2014 | 30 | - | - | 888 | 918 | 1,804 | 189,784 | 0.96% |
| 2015 | 39 | - | 2 | 1,319 | 1,360 | 2,667 | 192,451 | 1.41% |
| 2016 | 55 | - | 2 | 2,992 | 3,049 | 5,945 | 198,396 | 3.09% |
| 2017 | 62 | - | 12 | 574 | 648 | 1,318 | 199,714 | 0.66% |
| 2018 | 63 | - | 2 | 812 | 877 | 1,761 | 201,475 | 0.88% |
| 2019 | 44 | - | - | 2,955 | 2,999 | 5,836 | 207,311 | 2.90% |

Source: LYRB, BEBR - Utah Construction Information Database (Table 3 "Year-to-Date Dwelling Units by Type for State, Cities and Counties).

Analysis assumes an average household size of 3.02 persons for single-family dwellings and 1.93 persons for multifamily dwellings, based on 2017 American Community Survey 1-Year Estimates.

DEMAND ANALYSIS: PROJECTED GROWTH

For purposes of this analysis, population is anticipated to reach 234,664 within the 10-year planning horizon. This represents an increase of 27,353 people. The population projections are based on several sources including Census data, Kem C. Gardner Policy Institute, City data and other development data. The total change in population from 2000 to 2010 was 2.58 percent, or 4,697 persons. GOMB projects population within the City will reach approximately 210,000 by 2020.

In the same time period, general commercial square footage is anticipated to increase by 1,167,143 square feet, with office and industrial development increasing by 1,329,885 and 24,509,851 respectively (See **TABLE 3.4**).

Source: LYRB, SF = Square Feet

Analysis assumes an average household size of 3.02 persons for single-family dwellings and 1.93 persons for multifamily dwellings, based on 2017 American Community Survey 1-Year Estimates.

These projections were also compared to development data provided by Newmark Grubb Acres. See APPENDIX A.

SECTION 4: TRANSPORTATION IFFP

TRANSPORTATION METHODOLOGY

The impact fee methodology for transportation is designed to address the needs of the City. The following key points summarize the impact fee structure:

- Estimate existing and future demand on the transportation system (detailed in **Section 3**).
- Estimate the value of the existing transportation system. By comparing the existing value of the transportation system to the current level of travel demand, establish a LOS threshold.
- A single project list was developed from the following adopted plans:
 - Transportation Master Plan;
 - Transit Master Plan:
 - Bike and Pedestrian Master Plan;
 - Capital Improvement Program;
 - Engineering 6-year Work Program
- Projects from these plans were evaluated for impact fee eligibility based on the nature of project. Non-capacity investments were eliminated, as were primarily maintenance and safety improvement projects).
- of the remaining eligible projects, the portion of those projects addressing existing deficiencies or carrying non-city growth were subtracted from eligible costs. To calculate the share of trip growth associated non-SLC development the Wasatch Front Regional Council (WFRC) travel model was used.
- The remaining list of eligible program costs were divided by Salt Lake City's expected growth PM peak hour vehicle trips over the next 10 years based on growth projections.
- A land use-based fee schedule was developed using PM peak hour vehicle trip rates.

TRANSPORTATION DEMAND ANALYSIS

The demand units utilized in this analysis are based on new or redeveloped residential and commercial land and the new trips generated from these land-use types. As residential and commercial growth occurs within the City, additional trips will be generated within the transportation system. The proposed impact fees are based upon the projected growth in demand units which are used as a means to quantify the impact that future users will have upon the City's system. The demand unit used in the calculation of the transportation impact fee is based upon each land use category's impact expressed in the number of PM peak hour vehicle trips generated between the hours of 4-6pm. The existing and future trip statistics used in this analysis were prepared by the City and professional consultants based on best available information and industry standard practice.

Based on the growth in trips, the City will need to expand its current facilities to accommodate new growth. New development will create an additional 52,838 PM peak hour trips in the next ten years, as show in **TABLE 4.1**. It is important to note that future trips will consist of motorized and non-motorized trips, however this methodology only accounts for motorized vehicle trips

TABLE 4.1: TRIP PROJECTIONS IN IFFP PLANNING HORIZON

| Түре | Units/SF | PM TRIPS (WEIGHTED AVERAGE) | EXISTING UNITS | EXISTING TRIPS | TOTAL IFF GROWTH (UNITS) | NEW TRIPS IN IFFP PLANNING HORIZON |
|-----------------------|----------|-----------------------------|----------------|----------------|--------------------------|---------------------------------------|
| Single Family | Units | 0.99 | 41,764 | 41,346 | 2,836 | 2,808 |
| Multifamily Units | Units | 0.45 | 49,490 | 22,271 | 10,946 | 4,926 |
| Residential Total | Units | 0.70 | 91,254 | 63,617 | 13,782 | 7,733 |

| Industrial | SF | 1.06 | 78,422 | 83,128 | 27,870 | 29,542 |
| Other | SF | 1.71 | 44,307 | 75,765 | 5,960 | 10,192 |
| Non-Residential Total | | | 196,256 | 306,724 | 36,537 | 45,105 |
| Combined Total | | | | 370,341 | 50,319 | 52,838 |

TABLE 4.2: TRIP PROJECTIONS THROUGH BUILDOUT (2050)

| Түре | Units/SF | PM TRIPS (WEIGHTED AVERAGE) | EXISTING UNITS | EXISTING TRIPS | TOTAL UNITS AT BUILDOUT | TOTAL TRIPS AT BUILDOUT |
|-------------------|----------|-----------------------------------|----------------|----------------|----------------------------|-------------------------|
| Residential Total | Units | 0.70 | 91,254 | 63,617 | 126,679 | 88,313 |
| Commercial | SF | 2.69 | 35,682 | 95,984 | 35,220 | 94,742 |
| Office | SF | 1.37 | 37,845 | 51,848 | 57,663 | 78,998 |

| Түре | Units/SF | PM TRIPS (WEIGHTED AVERAGE) | EXISTING UNITS | EXISTING TRIPS | TOTAL UNITS AT BUILDOUT | TOTAL TRIPS AT BUILDOUT |
|--------------------|----------|-----------------------------------|----------------|----------------|----------------------------|-------------------------|
| Industrial | SF | 1.06 | 78,422 | 83,128 | 114,355 | 121,216 |
| Other | SF | 1.71 | 44,307 | 75,765 | 57,886 | 98,985 |
| Non-Residential To | otal | | 196,256 | 306,724 | 265,124 | 393,941 |
| Combined Total | | | | 370,341 | | 482,254 |

The "PM Trips (Weighted Average)" column was weighted based on land use square footage and the associated peak hour trip rate for each category. The weighted average for the Other land use category is based on a simple average of Commercial, Office and Industrial uses. This data was used to develop the baseline existing trips and to project future trips. However, when determining the appropriate fee by land-use category, specific trip statistics are use for each land-use type. Additional details related to trip calculations can be found in **APPENDIX B**.

EXISTING FACILITY INVENTORY

According to the City, the existing system consists of the following amenities:

Torosswalks - Concrete 可以 Signals - Signalized 可以 Street Signs and Pavers Intersections 可以 Roadways - Concrete 可以 Sidewalks 可以 Linear Pavement 可以 Roadways - Asphalt Markings

₹ ADA Ramps Markings ₹ Bridges

The total replacement value of these improvements is estimated at \$2,082,909,279.

TABLE 4.3: REPLACEMENT VALUATION OF EXISTING FACILITIES

| Asset | MEASUREMENT UNIT | Count | UNIT REPLACEMENT VALUES | TOTAL REPLACEMENT VALUES |
|------------------------------------|------------------|------------|-------------------------|-----------------------------|
| Crosswalks - Concrete and Pavers | Square Feet | 131,120 | \$15 | \$1,966,800 |
| Sidewalks | Square Feet | 23,170,764 | \$10 | \$231,707,640 |
| ADA Ramps | Each | 15,141 | \$3,000 | \$45,423,000 |
| Signals - Signalized Intersections | Each | 392 | \$300,000 | \$117,600,000 |
| Pavement Markings - Linear | Linear Feet | 1,982,477 | \$0.5 | \$991,239 |
| Street Signs | Each | 38,603 | \$200 | \$7,720,600 |
| Roadway - Concrete | Lane Miles | 273 | \$1,250,000 | \$341,250,000 |
| Roadway - Asphalt | Lane Miles | 1,567 | \$750,000 | \$1,175,250,000 |
| Bridges | Each | 23 | \$7,000,000 | \$161,000,000 |
| | | | Grand Total | \$2,082,909,279 |

Based on the City's existing depreciation statements, the original value of existing infrastructure is estimated at \$457,155,385. The total original value including interest on existing debt services is \$464,021,083.

TABLE 4.4: ORIGINAL VALUATION OF EXISTING FACILITIES

| Original Value (2019 Depreciation Statements) | \$457,155,385 |
|---|---------------|
| Plus Interest | \$6,865,697 |
| Total Original Value | \$464,021,083 |
| Source: SLC Engineering, SLC Finance, LYRB | |

MANNER OF FINANCING EXISTING PUBLIC FACILITIES

The City has several outstanding bonds. This analysis includes debt and interest costs related to bonding issued for the construction of transportation facilities. The City issued the Series 2012A Sales Tax Revenue Bonds and the Series 2014 Motor Fuel Bonds to finance the construction and improvement of various City roads and infrastructure. The interest associated with these bonds is included in the determination of existing system valuation, as shown in **TABLE 4.4**.

General obligation bonds issued by the City are excluded from this analysis, since the City levies a property tax on the assessed value of existing and future development to pay the principal and interest on these bonds. It is anticipated that new development will contribute to the repayment of these bonds through the property tax levy.

LEVEL OF SERVICE ANALYSIS

In previous IFFP iterations, the City used vehicle LOS to evaluate the impact of growth on the transportation system. That policy structure does not support the City's goals to increase multimodal options and reduce drive alone trips, because measurable "system improvements" would only result in improved vehicle LOS.

Another means of identifying deficiencies was applied based on existing system value, which has been used in similar evaluations in other mature, urban cities. For example, in Portland, Oregon and Oakland, California an existing system value was determined based on the valuation of transportation infrastructure already in place and helped to establish a maximum cost per trip that could be charged in each city's impact fee program. Existing system facilities were acquired and developed to meet the needs of existing system users; a proportionate level of future investment per person trip is needed to maintain the current LOS. Any additional capacity investments up to this base LOS cost per trip, are therefore justified to equitably recover capacity costs from future system users.

As described in the Existing Facility Inventory section, the total original value of existing infrastructure including interest on existing debt services is \$464,021,083. The replacement value is estimated at over \$2 billion, with approximately \$500 million considered system improvements (assuming 25 percent is considered system improvements based on a GIS analysis of existing centerline miles of roadways designated as city arterials or collectors compared to total City centerline miles). This total existing system value in relation to the 2019 PM peak hour vehicle trips (which amount to 365,663) sets the current LOS cost per trip at \$1,419 per PM peak hour vehicle trip, which is higher than the proposed cost per trip identified in this analysis. Therefore, the impact fees proposed in this analysis do not increase the LOS above what is currently provided.

EXCESS CAPACITY

As stated above, the City's existing depreciation statements indicate that the original value of existing infrastructure including interest on existing debt services is \$464,021,083. It is anticipated that new development will benefit from the existing transportation network constructed within the Service Area. The Impact Fee Act allows for the inclusion of system improvements when determining impact fees. Typically, arterials and collector roadways are considered system improvements, with local roadways considered project or neighborhood improvements. A GIS analysis of existing roadways produced a total of 155.2 centerline miles of roadways designated as city arterials or collectors, compared to a total of 623.2 combined centerline miles designated as arterial, collector or local. The ratio of system improvements to the total is 25 percent. Therefore, 25 percent (or \$115,576,169) of the existing value is included in this analysis as impact fee eligible.

The determination of a buy-in component related to existing infrastructure is further refined based on the proportionate trips generated within the IFFP planning horizon, as it is anticipated that the existing system will benefit both existing and new development. Approximately 11 percent of the total demand on the system will occur within the IFFP planning horizon. As a result, \$12,663,158 of the total original system cost is included in this analysis.

PROJECT ELIGIBILITY

The transportation impact fees are designed to support the principal modes of travel in a multi-modal system. However, impact fees cannot be used to pay the costs of addressing maintenance or existing LOS deficiencies. When preparing the IFFP Transportation Project List, the City used the following criteria to initially identify the transportation projects that are eligible:

PROJECT ELIGIBILITY - STEP 1

- Froject is in an adopted City plan, for example:
 - Transportation Master Plan;
 - Transit Master Plan:
 - Bike and Pedestrian Master Plan;
 - Capital Improvement Program;
 - Engineering 6-year Work Program
- Froject adds or enhances capacity to the transportation system.
- Froject is designed to serve additional population and or employment over the next ten years.
- Froject is not entirely a preventive maintenance project.

PROJECT ELIGIBILITY – STEP 2

After establishing an initial IFFP Transportation Project List, the City applied two important adjustments to the eligible project cost based on 1) the nature of the project, and 2) the travel market benefiting from the project.

Regarding the nature of the project, it is acknowledged that roadway corridor projects may include eligible (capacity enhancements) and ineligible components (pavement maintenance and repair). The portion of projects addressing existing deficiencies were subtracted from eligible costs; this included removing the portions of project costs earmarked for pavement preservation.

The next step was to determine to portion of project costs associated with growth in the City. However, not all the growth comes from Salt Lake City development – there is a portion of growth that comes from surrounding jurisdictions. The City does not have the authority to charge growth in neighboring jurisdictions for their share of building new transportation infrastructure. To account for this legal limitation, adjustments were made for trips that pass-through Salt Lake City or only have one end of the trip starting or ending in the City. Since a substantial share of traffic on some Salt Lake City roads is generated by growth outside of the City, sources other than impact fees would have to pay the cost to accommodate growth outside of Salt Lake City.

To calculate the share of trip growth associated with SLC and non-SLC development the Wasatch Front Regional Council (WFRC) travel model was used. A "select-link" analysis method provides estimates of origin and destination of trips that use a specific transportation facility and determine the portion of trips relating to outside growth. Depending on the location, six percent to 42 percent of trips are related to outside growth.

See APPENDIX C for detail of project eligibility for individual projects.

FUTURE CAPITAL FACILITIES ANALYSIS

The City has identified the growth-related projects needed within the next ten years. Capital projects related to curing existing deficiencies were not included in the calculation of the impact fees. Total future projects applicable to new development are shown below.

TABLE 4.5 illustrates the estimated cost of future capital improvements within the Service Area, as identified in the IFFP. The total cost related to growth is \$12,675,000. A detail of the proposed capital improvements can be found in **Appendix C**.

TABLE 4.5: SUMMARY OF FUTURE SYSTEM IMPROVEMENTS WITHIN IFFP PLANNING HORIZON

| | TOTAL | 2019-2029 IFFP | PORTION OF PROGRAMS FUNDED BY IMPACT FEES |
|------------------------|---------------|----------------|---|
| Engineering Program | \$135,399,768 | \$10,301,000 | 8% |
| Transportation Program | \$22,265,000 | \$2,374,000 | 11% |
| Combined Total | \$157,664,768 | \$12,675,000 | 8% |

SYSTEM VS. PROJECT IMPROVEMENTS

System improvements are defined as existing and future public facilities designed to provide services to service areas within the community at large. Project improvements are improvements and facilities that are planned and designed to provide service for a specific development (resulting from a development activity) and considered necessary for the use and convenience of the occupants or users of that development. To the extent possible, this analysis only includes the costs of system improvements related to new growth within the proportionate share analysis.

For the purposes of this analysis, system improvements are defined as arterial and collector streets, new and upgrades to traffic signalization, and related appurtenances. Each of these facilities are designed to manage new trips (motorized and non-motorized trips) within the Service Area and to maintain the existing LOS.

FINANCING STRATEGY AND CONSIDERATION OF ALL REVENUE SOURCES

The IFFP must also include a consideration of all revenue sources, including impact fees and the dedication of system improvements, which may be used to finance system improvements. In conjunction with this revenue analysis, there must be a determination that impact fees are necessary to achieve an equitable allocation of the costs of the new facilities between the new and existing users.

In considering the funding of future facilities, the IFFP has identified the portion of each project that is intended to be funded by the City, as well as funding sources from other government agencies. The cost applied to the City includes growth and non-growth-

^{5 11-36}a-102(21)

^{6 11-36}a-102(14)

^{7 11-36}a-302(2)

^{8 11-36}a-302(3)

related projects. The capital projects that will be constructed to cure the existing system deficiencies will be funded through General Fund revenues. All other capital projects within the next ten years, which are intended to serve new growth, will be funded through impact fees or on a pay-as-you-go approach. Where these revenues are not sufficient, the City may need to issue bonds or issue inter-fund loans to construct the proposed projects.

Other revenues such as grants can be used to fund these types of expenditures. The impact fees should be adjusted if grant monies are received. New development may be entitled to a reimbursement for any grants or donations received by the City for growth related projects or for developer funded IFFP projects. It is anticipated that future project improvements will be funded by the developer. These costs have been excluded from the calculation of the impact fee.

A special bond election held on November 6, 2018 gave voter authorization to the City to issue up to \$87 million in general obligation bonds to fund all or a portion of the costs of improving various streets and roads throughout the City and related infrastructure improvements. The current issuance is the first block of general obligation bonds of approximately \$20 million. The City anticipates issuing the remaining authorization within the next 5-6 years. If a portion of bond proceeds from this general obligation bond are used to fund growth-related system improvements, the impact fees may need to be reevaluated to determine if a credit is necessary within the proportionate share analysis.

SECTION 5: PROPORTIONATE SHARE ANALYSIS

PROPOSED TRANSPORTATION IMPACT FEE

The transportation impact fee utilizes the New Facility – Plan Based Approach, which is based on a defined set of capital costs specified for future development. The proportionate share analysis determines the proportionate cost assignable to new development based on the proposed capital projects and the new growth served by the proposed projects. The total growth-related capital cost is \$12,675,000. The analysis also considers the existing impact fee fund balance and applies an appropriate credit. In addition to the proposed new facilities, new development benefits from the existing transportation infrastructure already constructed. The inclusion of this buy-in, plus new facilities, would result in a maximum impact fee cost per trip as shown in TABLE 5.1.

TABLE 5.1: MAXIMUM IMPACT FEE COST PER TRIP

| | VALUATION | % to Growth | IMPACT FEE ALLOCATION | TRIPS | COST PER TRIP |
|-------------------------|---------------|-------------|-----------------------|--------|---------------|
| Buy-In | \$115,576,169 | 11% | \$12,663,158 | 52,838 | \$240 |
| Future Facilities | \$157,664,768 | 8% | \$12,675,000 | 52,838 | \$240 |
| Impact Fee Fund Balance | (\$2,515,087) | 100% | (\$2,515,087) | 52,838 | (\$48) |
| Professional Expense | \$29,476 | 100% | \$29,476 | 52,838 | \$1 |
| Total | \$270,755,326 | | \$22,852,547 | | \$433 |

The impact fee by land use type is illustrated in **TABLE 5.2**.

TABLE 5.2: IMPACT FEE SUMMARY BY LAND USE TYPE

^{1.} ITE Trip Generation 10th Edition: 4-6 PM Peak Hour Vehicle Trip Generation Rates for the Adjacent Street Traffic (weekday 4-6PM); This Table represents only the most common uses and is NOTall-inclusive.

Land uses not identified in **TABLES 5.2** will be calculated based on the non-standard impact fee formula using the most recent Institute of Traffic Engineers (ITE) Trip Generation Manual statics of PM peak hour trips between the hours of 4-6pm and appropriate adjustment factors.

Non-Standard Impact Fees

The City reserves the right under the Impact Fees Act⁹ to assess an adjusted fee that more closely matches the true impact that a specific land use will have upon the City's transportation system. This adjustment could result in a different impact fee if evidence suggests a particular user will create a different impact than what is standard for its category. The City may also decrease the impact fee if the developer can provide documentation, evidence, or other credible analysis that the proposed impact will be lower than what is proposed in this analysis.

FORMULA FOR NON-STANDARD TRANSPORTATION IMPACT FEES:

Total Units x Estimate of PM Peak Hour Trips per Unit x Adjustment Factor x \$433 = Impact Fee per Unit

^{9 11-36}a-402(1)(c)

SECTION 6: IMPACT FEE CONSIDERATIONS

EQUITY OF IMPACT FEES

Impact fees are intended to recover the costs of capital infrastructure that relate to future growth. The impact fee calculations are structured for impact fees to fund 100 percent of the growth-related facilities identified in the proportionate share analysis as presented in the impact fee analysis. Even so, there may be years that impact fee revenues cannot cover the annual growth-related expenses. In those years, other revenues, such as General Fund revenues, will be used to make up any annual deficits. Any borrowed funds are to be repaid in their entirety through impact fees.

NECESSITY OF IMPACT FEES

An entity may only impose impact fees on development activity if the entity's plan for financing system improvements establishes that impact fees are necessary to achieve parity between existing and new development. This analysis has identified the improvements to public facilities and the funding mechanisms to complete the suggested improvements. Impact fees are identified as a necessary funding mechanism to help offset the costs of new capital improvements related to new growth. In addition, alternative funding mechanisms are identified to help offset the cost of future capital improvements.

CONSIDERATION OF ALL REVENUE SOURCES

The Impact Fees Act requires the proportionate share analysis to demonstrate that impact fees paid by new development are the most equitable method of funding growth-related infrastructure.

EXPENDITURE OF IMPACT FEES

Legislation requires that impact fees should be spent or encumbered within six years after each impact fee is paid. Impact fees collected in the next six years should be spent on those projects outlined in the IFFP as growth related costs to maintain the LOS. Impact fees collected as a buy-in to existing facilities can be allocated to the General Fund to repay the City for historic investment.

GROWTH-DRIVEN EXTRAORDINARY COSTS

The City does not anticipate any extraordinary costs necessary to provide services to future development.

SUMMARY OF TIME PRICE DIFFERENTIAL

The Impact Fees Act allows for the inclusion of a time price differential to ensure that the future value of costs incurred at a later date are accurately calculated to include the costs of construction inflation. This analysis includes an inflation component to reflect the future cost of facilities. The impact fee analysis should be updated regularly to account for changes in costs estimates over time.

NOTES:

Project list and cost estimates from SLC Engineering. Note there are not projects listed for FY 2026-2029. Costs do not account for inflation.

Eligibility estimates from Fehr & Peers

- 1. Based on Select Link analysis (travel model) to determine proportion of roadway traffic that is locally oriented within SLC.

 2. Estimated portion of the project costs that is not maintenance related. Cost relates to necessary multi-modal appurtenances under the City's Complete Streets ordinance. Based on historical experience, the average cost for complete streets elements comes out to about 10%.

| | PROJECT NAME | Notes | ESTIMATED COST | INFLATED COST | ELIGIBILITY (TRAVEL DEMAND ATTRIBUTABLE TO SLC)4 | ELIGIBILITY (SCOPE OF PROJECT) ⁵ | COMPOSITE ELIGIBILITY ⁶ | ELIGIBLE PRO |
|------|---|---|----------------|---------------|--|---|---------------------------------------|--------------|
| 2019 | Intersection upgrades | Upgrading key intersections to improve traffic flow and safety: roundabouts, new or upgraded traffic signals, etc. The 900 South/1100 East roundabout will cost about \$500k. New traffic signals at one intersection costs about \$250k. | \$6,000,000 | \$6,000,000 | 75% | 14% | 10% | \$ |
| 2019 | Radar units for traffic signals | Increase usable capacity of intersections through improved technology. Radar units cost about \$30k per intersection, allowing for installation on 150 intersections | \$4,500,000 | \$4,500,000 | 75% | 14% | 10% | |
| 2019 | Bus stops | Under the City's Complete Streets ordinance, these are necessary appurtenances within the street right of way. A new ADA compliant Bus stop costs about \$15k-20k per stop, including flatwork and shelter. This money will allow us to build 25-30 bus stops over a 10-year period. | \$500,000 | \$500,000 | 75% | 14% | 10% | |
| 2019 | 600 North safety enhancements | Improving safety for walking and bilking within street right-of-way. "Life on State" pedestrian safety enhancements are estimated to cost approximately \$750,000. | \$750,000 | \$750,000 | 75% | 14% | 10% | |
| 2019 | 9-Line | Portion of path within the street right-of-way. The Cost estimate to add the central portion of the 9-Line onto the street reconstruction project came in at \$5.3M. We received a County grant for \$4.3M. \$1.1M will fill that gap, plus a small contingency. | \$1,100,000 | \$1,100,000 | 100% | 14% | 14% | |
| 2019 | Ongoing bike and pedestrian safety enhancements | \$600k/year for improving safety for walking and biking within street right- of-way. HAWK Beacons cost \$150k, RRFBs are about \$12k, bulb outs and median refuge islands are \$20k.40k, raised crosswalks are about \$8k. The average cost for major enhancements at a crosswalk come in around \$100k per crossing, allowing up to 6 crosswalk projects per year for 10 years. | \$6,000,000 | \$6,000,000 | 75% | 14% | 10% | |
| 2019 | Folsom Trail | Supplemental funding for Folsom Trail needed to secure right-of-way to address gap in pathway alignment. | \$3,415,000 | \$3,415,000 | 75% | 14% | 10% | |
| | TOTAL | | \$22,265,000 | \$22,265,000 | | | | |

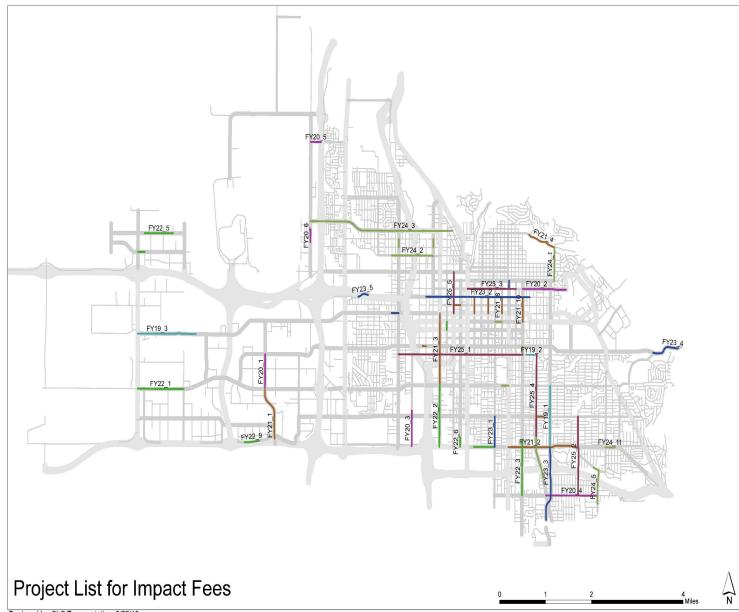

Project list and cost estimates from SLC Transportation. Costs do not account for inflation.

Eligibility estimates from Fehr & Peers

- 4. Based on Select Link analysis (travel model) to determine proportion of roadway traffic that is locally oriented within SLC. Since projects are not location specific, eligibility estimated based on average of corridorprojects. 5. Estimated based on growth in peak hour trips (2019-2029).
- 6. Composite eligibility = (eligibility based on Travel Demand) x (eligibility based on Project Scope)

SALT LAKE CITY ORDINANCE No.____of 2020

(ADOPTION OF UPDATED IMPACT FEE FACILITIES PLAN FOR TRANSPORTATION SERVICES AND AMENDMENT TO CONSOLIDATED FEE SCHEDULE)

An ordinance adopting an updated impact fee facility plan for transportation services pursuant to Chapter 18.98 of the Salt Lake City Code and Chapter 11-36a of the Utah Code, and for providing corresponding changes to the Salt Lake City Consolidated Fee Schedule.

WHEREAS, Chapter 18.98 of the Salt Lake City Code and Chapter 11-36a of the Utah Code govern the preparation and adoption of impact fee facilities plans and impact fee analyses; and

WHEREAS, the City Council desires to adopt an updated impact fee facilities plan for transportation services; and

WHEREAS, Lewis Young Robertson & Burningham, Inc. ("Consultants") have prepared for the City an impact fees facility plan ("IFFP") and impact fee analysis ("IFP") for transportation services; and

WHEREAS, in connection with the adoption of the new impact fees facilities plan, it is proposed that the Salt Lake City Consolidated Fee Schedule be amended to modify the City's impact fees as shown in the attached Exhibit A; and

WHEREAS, after a public hearing, the City Council finds (i) the fees set forth in Exhibit A are necessary, reasonable, and equitable in relation to regulatory and service costs incurred by the City, and (ii) adoption of this ordinance reasonably furthers the health, safety, and general welfare of the citizens of Salt Lake City.

NOW, THEREFORE, be it ordained by the City Council of Salt Lake City, Utah:

SECTION 1. Adopting the Impact Fee Facilities Plan. The City Council hereby adopts the Impact Fee Facilities Plan for transportation services prepared by Consultants dated March 2020, which is available on the City's website or in the office of Community and Neighborhoods, and hereby adopts the impact fee in accordance with the IFFP and IFA.

SECTION 2. <u>Amendment to the Consolidated Fee Schedule</u>. The Salt Lake City Consolidated Fee Schedule is hereby amended, in pertinent part, to reflect the modified impact fees as set forth on <u>Exhibit A</u> attached hereto, and that a copy of the amended Consolidated Fee Schedule will be posted on the City's website.

SECTION 3. <u>Effective Date</u>. This ordinance shall take effect immediately upon the date of its first publication, provided, however, that any change in impact fees shall not take effect until 90 days after the adoption of this ordinance.

CITY COUNCIL TRANSMITTAL

Date Received: March !

Date sent to Council: March !

TO:

Salt Lake City Council

Chris Wharton, Chair

DATE:

FROM: Marcia L. White, Director Department of Community & Neighborhoods

SUBJECT: Transportation Impact Fees Facilities Plan (IFFP) draft

STAFF CONTACT: Dan Rip, Neighborhood Development Manager,

daniel.rip@slcgov.com, ext. 6308

DOCUMENT TYPE: Information Only

RECOMMENDATION: Review the attached IFFP draft

BUDGET IMPACT: None

BACKGROUND/DISCUSSION: The City has contracted with Lewis Young Robertson & Burningham, LYRB a financial advisory firm, to update the Transportation Impact Fees Analysis and Impact Fees Facilities Plan. The scope of their engagement includes how best to include existing and future facilities in the impact fee calculations and to review all potential funding mechanisms. In addition, the City contracted with a traffic engineer to collect travel demand data, evaluate excess capacity and estimate growth-driven impacts on new roadway projects. The plan also identifies the level of service established in the city, determines needs with assistance from City departments and divisions, creates a project list, and determines the appropriate impact fees that should be charged to new development.

Attached is a draft of the Transportation IFFP for your review.

PUBLIC PROCESS: Public hearing to be scheduled by City Council.

IMPACT FEE CERTIFICATION

IFFP CERTIFICATION

Lewis Young Robertson & Burningham, Inc. and Salt Lake City jointly certify that the Impact Fee Facilities Plan ("IFFP") prepared for transportation services:

- 1. includes only the costs of public facilities that are:
 - a. allowed under the Impact Fees Act; and
 - b. actually incurred; or
 - c. projected to be incurred or encumbered within six years after the day on which each impact fee is paid;
- 2. does not include:
 - a. costs of operation and maintenance of public facilities;
 - b. costs for qualifying public facilities that will raise the level of service for the facilities, through impact fees, above the level of service that is supported by existing residents;
 - c. an expense for overhead, unless the expense is calculated pursuant to a methodology that is consistent with generally accepted cost accounting practices and the methodological standards set forth by the federal Office of Management and Budget for federal grant reimbursement; and
- complies in each and every relevant respect with the Impact Fees Act.

LEWIS YOUNG ROBERTSON & BURNINGHAM, INC. SALT LAKE CITY

IFA CERTIFICATION

Lewis Young Robertson & Burningham, Inc. certifies that the Impact Fee Analysis ("IFA") prepared for transportation services:

- 1. includes only the costs of public facilities that are:
 - a. allowed under the Impact Fees Act; and
 - b. actually incurred; or
 - c. projected to be incurred or encumbered within six years after the day on which each impact fee is paid;
- does not include:
 - a. costs of operation and maintenance of public facilities;
 - b. costs for qualifying public facilities that will raise the level of service for the facilities, through impact fees, above the level of service that is supported by existing residents;
 - an expense for overhead, unless the expense is calculated pursuant to a methodology that is consistent with generally accepted cost accounting practices and the methodological standards set forth by the federal Office of Management and Budget for federal grant reimbursement;
 - d. offsets costs with grants or other alternate sources of payment; and
- 3. complies in each and every relevant respect with the Impact Fees Act.

Lewis Young Robertson & Burningham, Inc. makes this certification with the following caveats:

- 1. All of the recommendations for implementation of the IFFP made in the IFFP documents or in the IFA documents are followed by City Staff and elected officials.
- 2. If all or a portion of the IFFP or IFA are modified or amended, this certification is no longer valid.
- 3. All information provided to LYRB is assumed to be correct, complete, and accurate. This includes information provided by the City as well as outside sources.

LEWIS YOUNG ROBERTSON & BURNINGHAM, INC.

SECTION 1: EXECUTIVE SUMMARY

The purpose of this Impact Fee Facilities Plan (IFFP), with supporting Impact Fee Analysis (IFA), is to fulfill the requirements established in Utah Code Title 11 Chapter 36a, the "Impact Fees Act," and help Salt Lake City (the "City") fund necessary capital improvements for future growth. This document will address the future transportation infrastructure needed to serve the City through the next ten years, as well as the appropriate impact fees the City may charge to new growth to maintain the level of service (LOS).

- Impact Fee Service Area: The Service Area for the transportation impact fees includes all areas within the City. FIGURE 3.1 illustrates the proposed Service Area. This document identifies the necessary future system improvements for the Service Area that will maintain the existing LOS into the future.
- Demand Analysis: The demand units utilized in this analysis include residential and non-residential development and the existing and projected trips anticipated from new development. As new development and redevelopment occurs within the City, it generates increased demand on City infrastructure. The system improvements identified in this study are designed to maintain the existing LOS for any new or redeveloped property within the City.
- **Level of Service:** The existing LOS is defined in **Section 4** of this document. Through the inventory of existing facilities, combined with the growth assumptions, this analysis identifies the LOS, which is provided to existing residents and ensures that future facilities maintain these standards. Any excess capacity identified within existing facilities can be apportioned to new development.
- **Excess Capacity:** The demand analysis, existing facility inventory and LOS analysis allow for the development of a list of capital facilities necessary to serve new growth and to maintain the existing system. This list includes any excess capacity of existing facilities, as well as future system improvements necessary to maintain the LOS. The inclusion of excess capacity is known as a "buy-in." Any demand generated from new development that overburdens the existing system beyond the existing capacity justifies the construction of new facilities.
- The City has several outstanding bonds. This analysis includes debt and interest costs related to bonding issued for the construction of transportation facilities. The City issued the Series 2012A Sales Tax Revenue Bonds and the Series 2014 Motor Fuel Bonds to finance the construction and improvement of various City roads and infrastructure. The interest associated with these bonds is included in the determination of existing system valuation.
- **Capital Facilities Analysis:** Due to the projected redevelopment within the City, additional capital improvements will be necessary related to transportation infrastructure.
- Funding of Future Facilities: This analysis assumes future growth-related facilities will be funded through a combination of General Fund revenues, other governmental revenues and impact fee revenues. Where applicable, only the portion of future projects intended to be funded by the City are included in this analysis.

SUMMARY OF PROPOSED GENERAL FUND IMPACT FEES

The impact fees proposed in this analysis will be assessed within the entire Service Area. The table below illustrates the calculated impact fee for transportation by land-use category.

TABLE 1.1: IMPACT FEE SUMMARY BY GENERAL LAND USE

| LAND USE GROUP | ITE CODE | ITE LAND USE CATEGORY | PM PEAK VEHICLE TRIP RATE ¹ | PASS BY ADJUSTMENT | NET NEW TRIPS | Unit of Measure | FEE PER UNIT LAND USE |

| | 945 | Gas Station w/convenience | 13.99 | 56% | 6.16 | pump | \$2,702 |

^{1.} ITE Trip Generation 10th Edition: 4-6 PM Peak Hour Vehicle Trip Generation Rates for the Adjacent Street Traffic (weekday 4-6PM); This Table represents only the most common uses and is NOT all-inclusive.

Land uses not identified in **TABLES 1.1** will be calculated based on the non-standard impact fee formula using the most recent Institute of Traffic Engineers (ITE) Trip Generation Manual for peak hour vehicle trip generation rates for the adjacent street traffic (weekday 4-6PM). For special situations and land uses not included in the table above, refer to Non-Standard Impact Fees.

Non-Standard Impact Fees

The City reserves the right under the Impact Fees Act¹ to assess an adjusted fee that more closely matches the true impact that a specific land use will have upon the City's transportation system. This adjustment could result in a different impact fee if evidence suggests a particular user will create a different impact than what is standard for its category. The City may also decrease the impact fee if the developer can provide documentation, evidence, or other credible analysis that the proposed impact will be lower than what is proposed in this analysis.

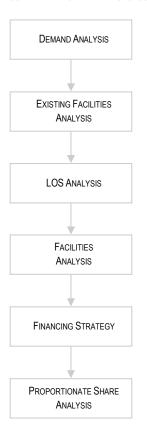

FORMULA FOR NON-STANDARD TRANSPORTATION IMPACT FEES:

Total Units x Estimate of PM Peak Hour Trips per Unit x Adjustment Factor x \$439 = Impact Fee per Unit

¹ 11-36a-402(1)(c)

SECTION 2: GENERAL IMPACT FEE METHODOLOGY

FIGURE 2.1: IMPACT FEE METHODOLOGY

The purpose of this study is to fulfill the requirements of the Impact Fees Act regarding the establishment of an IFFP and IFA. The IFFP identifies the demands placed upon the City's existing facilities by future development and evaluate how these demands will be met by the City. The IFFP is also intended to outline the improvements, which are intended to be funded by impact fees. The purpose of IFA is to allocate the cost of the new facilities and any excess capacity to new development, while ensuring that all methods of financing are considered. The Impact Fee Act requires that the IFFP and IFA consider the historic LOS provided to existing development and ensure that the proposed impact fees maintain the existing LOS. The following elements are important considerations when completing an IFFP and IFA.

DEMAND ANALYSIS

The demand analysis serves as the foundation for the IFFP. This element focuses on a specific demand unit related to each public service – the existing demand on public facilities and the future demand as a result of new development that will affect system facilities.

EXISTING FACILITY INVENTORY

In order to quantify the demands placed upon existing public facilities by new development activity, to the extent possible the IFFP provides an inventory of the City's existing system facilities. The inventory valuation should include the original construction cost and estimated useful life of each facility. The inventory of existing facilities is important to determine the excess capacity of existing facilities and the utilization of excess capacity by new development.

LEVEL OF SERVICE ANALYSIS

"Level of service" means the defined performance standard or unit of demand for each capital component of a public facility within a service area. Through the inventory of existing facilities, combined with the growth assumptions, this analysis identifies the existing LOS that is provided to a community's existing residents and ensures that future facilities maintain these standards.

EXCESS CAPACITY AND FUTURE CAPITAL FACILITIES ANALYSIS

The demand analysis, existing facility inventory and LOS analysis allow for the development of a list of capital projects necessary to serve new growth and to maintain the existing system. This list includes any excess capacity of existing facilities as well as future system improvements necessary to maintain the LOS. Any excess capacity identified within existing facilities can be apportioned to new development. Any demand generated from new development that overburdens the existing system beyond the existing capacity justifies the construction of new facilities.

FINANCING STRATEGY

This analysis must also include a consideration of all revenue sources, including impact fees, future debt costs, alternative funding sources and the dedication of system improvements, which may be used to finance system improvements.² In conjunction with this revenue analysis, there must be a determination that impact fees are necessary to achieve an equitable allocation of the costs of the new facilities between the new and existing users.³

PROPORTIONATE SHARE ANALYSIS

The written impact fee analysis is required under the Impact Fees Act and must identify the impacts placed on the facilities by development activity and how these impacts are reasonably related to the new development. The written impact fee analysis must include a proportionate share analysis, clearly detailing each cost component and the methodology used to calculate each impact fee. A local political subdivision or private entity may only impose impact fees on development activities when its plan for financing

^{2 11-36}a-302(2)

^{3 11-36}a-302(3)

system improvements establishes that impact fees are necessary to achieve an equitable allocation of the costs borne in the past and to be borne in the future (UCA 11-36a-302).

IMPACT FEE METHODOLOGIES

There are two methods employed in this analysis to determine the maximum allowable impact fees: the Growth-Driven Approach or the Plan Based Approach.

GROWTH-DRIVEN (PERPETUATION OF EXISTING LOS)

The growth-driven method utilizes the existing LOS and perpetuates that LOS into the future. Impact fees are then calculated to provide sufficient funds for the entity to expand or provide additional facilities, as growth occurs within the community. Under this methodology, impact fees are calculated to ensure new development provides sufficient investment to maintain the current LOS standards in the community. This approach is often used for public facilities that are not governed by specific capacity limitations and do not need to be built before development occurs (i.e. park facilities).

New Facility – Plan Based (Fee Based on Defined CIP)

Impact fees can be calculated based on a defined set of capital costs specified for future development. The improvements are identified in a capital plan or impact fee facilities plan as growth-related system improvements. The total cost is divided by the total demand units the improvements are designed to serve. Under this methodology, it is important to identify the existing LOS and determine any excess capacity in existing facilities that could serve new growth. Impact fees are then calculated based on many variables centered on proportionality and LOS.

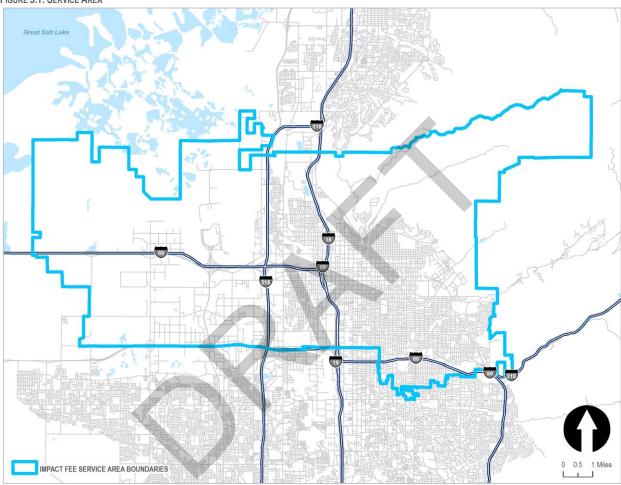

SECTION 3: OVERVIEW OF SERVICE AREA AND GENERAL DEMAND FIGURES

SERVICE AREAS

Utah Code requires the impact fee enactment to establish one or more service areas within which impact fees will be imposed.⁴ The Service Area for the transportation impact fee includes all areas within the current municipal boundaries of the City, as shown in **FIGURE 3.1**. This document identifies the necessary future system improvements for the Service Area that will maintain the existing LOS into the future.

FIGURE 3.1: SERVICE AREA

DEMAND ANALYSIS: EXISTING CONDITIONS

The demand units utilized in this analysis include development square feet (SF) and trip generation statistics. As new development and redevelopment occurs within the City, it generates increased demand on City infrastructure. The system improvements identified in this study are designed to maintain the existing LOS for any new or redeveloped property within the City.

TABLES 3.1 – 3.4 identify the existing development conditions within the City, as well as the anticipated new development forecasted to occur within the IFFP planning horizon.

TABLE 3.1: EXISTING LAND USE DATA

| Түре | SQUARE FEET | ACRES | MARKET VALUE | ASSESSED VALUE |
|-------------|-------------|-------|------------------|------------------|
| Residential | 135,873,077 | 9,843 | \$22,446,992,010 | \$12,075,661,079 |
| Commercial | 35,681,878 | 6,304 | \$4,017,957,350 | \$3,701,563,417 |
| Office | 37,844,918 | 2,490 | \$5,145,913,580 | \$4,226,929,516 |

⁴ UC 11-36a-402(1)(a)

| Түре | SQUARE FEET | ACRES | MARKET VALUE | ASSESSED VALUE |
|----------------------------|-------------|--------|------------------|------------------|
| Industrial | 78,422,267 | 3,389 | \$5,360,469,040 | \$5,161,542,049 |
| Vacant | 4,082,573 | 3,879 | \$856,660,270 | \$593,857,967 |
| Agricultural/Forest/Mining | 1,067,450 | 8,431 | \$266,813,870 | \$49,829,215 |
| Other | 40,504,066 | 22,267 | \$9,798,641,790 | \$319,407,393 |
| Total | 333,476,229 | 56,603 | \$47,893,447,910 | \$26,128,790,636 |

Existing parcel data indicates the majority of assessed value and building square footage is attributed to residential development. A total of 333,476,229 building square feet and \$47,893,447,910 of assessed market value exist within the City as shown in **TABLE 3.1**. The 2010 estimated population figure for the City was 186,806. The current population is estimated using building permit data (**TABLE 3.2**) from 2000 to 2019. The existing population is estimated at 207,311. For the purposes of determining impact fee demand, this analysis does not consider vacancy rates. The impact fee demand considers all development for which a building permit is issued.

TABLE 3.2: BUILDING PERMIT DATA

Source: LYRB, BEBR - Utah Construction Information Database (Table 3 "Year-to-Date Dwelling Units by Type for State, Cities and Counties).

Analysis assumes an average household size of 3.02 persons for single-family dwellings and 1.93 persons for multifamily dwellings, based on 2017 American Community Survey 1-Year Estimates.

DEMAND ANALYSIS: PROJECTED GROWTH

For purposes of this analysis, population is anticipated to reach 234,664 within the 10-year planning horizon. This represents an increase of 27,353 people. The population projections are based on several sources including Census data, Kem C. Gardner Policy Institute, City data and other development data. The total change in population from 2000 to 2010 was 2.58 percent, or 4,697 persons. GOMB projects population within the City will reach approximately 210,000 by 2020.

In the same time period, general commercial square footage is anticipated to increase by 1,167,143 square feet, with office and industrial development increasing by 1,329,885 and 24,509,851 respectively (See **TABLE 3.4**).

SECTION 4: TRANSPORTATION IFFP

TRANSPORTATION METHODOLOGY

The impact fee methodology for transportation is designed to address the needs of the City. The following key points summarize the impact fee structure:

- Estimate existing and future demand on the transportation system (detailed in **Section 3**).
- Estimate the value of the existing transportation system. By comparing the existing value of the transportation system to the current level of travel demand, establish a LOS threshold.
- A single project list was developed from the following adopted plans:
 - Transportation Master Plan;
 - Transit Master Plan;
 - Bike and Pedestrian Master Plan;
 - Capital Improvement Program;
 - Engineering 6-year Work Program
- Projects from these plans were evaluated for impact fee eligibility based on the nature of project. Non-capacity investments were eliminated, as were primarily maintenance and safety improvement projects).
- of the remaining eligible projects, the portion of those projects addressing existing deficiencies or carrying non-city growth were subtracted from eligible costs. To calculate the share of trip growth associated non-SLC development the Wasatch Front Regional Council (WFRC) travel model was used.
- The remaining list of eligible program costs were divided by Salt Lake City's expected growth PM peak hour vehicle trips over the next 10 years based on growth projections.
- A land use-based fee schedule was developed using PM peak hour vehicle trip rates.

TRANSPORTATION DEMAND ANALYSIS

The demand units utilized in this analysis are based on new or redeveloped residential and commercial land and the new trips generated from these land-use types. As residential and commercial growth occurs within the City, additional trips will be generated within the transportation system. The proposed impact fees are based upon the projected growth in demand units which are used as a means to quantify the impact that future users will have upon the City's system. The demand unit used in the calculation of the transportation impact fee is based upon each land use category's impact expressed in the number of PM peak hour vehicle trips generated between the hours of 4-6pm. The existing and future trip statistics used in this analysis were prepared by the City and professional consultants based on best available information and industry standard practice.

Based on the growth in trips, the City will need to expand its current facilities to accommodate new growth. New development will create an additional 52,209 PM peak hour trips in the next ten years, as show in **TABLE 4.1**. It is important to note that future trips will consist of motorized and non-motorized trips, however this methodology only accounts for motorized vehicle trips

TABLE 4.1: TRIP PROJECTIONS IN IFFP PLANNING HORIZON

| Түре | Units/SF | PM TRIPS (WEIGHTED AVERAGE) | EXISTING UNITS | EXISTING TRIPS | TOTAL IFF GROWTH (UNITS) | NEW TRIPS IN IFFP PLANNING HORIZON |
|-----------------------|----------|-----------------------------|----------------|----------------|--------------------------|---------------------------------------|
| Single Family | Units | 0.99 | 41,764 | 41,346 | 2,836 | 2,808 |
| Multifamily Units | Units | 0.45 | 49,490 | 22,271 | 10,946 | 4,926 |
| Residential Total | Units | 0.70 | 91,254 | 63,617 | 13,782 | 7,733 |

| Office | SF | 1.37 | 37,845 | 51,848 | 1,447 | 1,983 |
| Industrial | SF | 1.06 | 78,422 | 83,128 | 27,870 | 29,542 |
| Other | SF | 1.71 | 41,572 | 71,087 | 5,592 | 9,563 |
| Non-Residential Total | | | 193,521 | 302,047 | 36,169 | 44,476 |
| Combined Total | | | | 365,663 | 49,951 | 52,209 |

TABLE 4.2: TRIP PROJECTIONS THROUGH BUILDOUT (2050)

| Түре | Units/SF | PM TRIPS (WEIGHTED AVERAGE) | EXISTING UNITS | EXISTING TRIPS | TOTAL UNITS AT BUILDOUT | TOTAL TRIPS AT BUILDOUT |
|-------------------|----------|-----------------------------------|----------------|----------------|----------------------------|-------------------------|
| Residential Total | Units | 0.70 | 91,254 | 63,617 | 126,679 | 88,313 |
| Commercial | SF | 2.69 | 35,682 | 95,984 | 35,220 | 94,742 |
| Office | SF | 1.37 | 37,845 | 51,848 | 57,663 | 78,998 |

| Түре | Units/SF | PM TRIPS (WEIGHTED AVERAGE) | EXISTING UNITS | EXISTING UNITS EXISTING TRIPS | | TOTAL TRIPS AT BUILDOUT |
|-----------------------|----------|-----------------------------------|----------------|-------------------------------|---------|----------------------------|
| Industrial | SF | 1.06 | 78,422 | 83,128 | 114,355 | 121,216 |
| Other | SF | 1.71 | 41,572 | 71,087 | 54,312 | 92,874 |
| Non-Residential Total | | | 193,521 | 302,047 | 261,550 | 387,830 |
| Combined Total | | | | 365,663 | | 476,143 |

The "PM Trips (Weighted Average)" column was weighted based on land use square footage and the associated peak hour trip rate for each category. The weighted average for the Other land use category is based on a simple average of Commercial, Office and Industrial uses. This data was used to develop the baseline existing trips and to project future trips. However, when determining the appropriate fee by land-use category, specific trip statistics are use for each land-use type. Additional details related to trip calculations can be found in **APPENDIX B**.

EXISTING FACILITY INVENTORY

According to the City, the existing system consists of the following amenities:

☐ Crosswalks - Concrete and Pavers
 ☐ Signals - Signalized Intersections
 ☐ Sidewalks
 ☐ Linear Pavement

ADA Ramps Markings

Street Signs

Roadways - Concrete
Roadways - Asphalt

■ Bridges

The total replacement value of these improvements is estimated at \$2,082,909,279.

TABLE 4.3: REPLACEMENT VALUATION OF EXISTING FACILITIES

| ASSET | MEASUREMENT UNIT | COUNT | UNIT REPLACEMENT VALUES | TOTAL REPLACEMENT VALUES | |
|------------------------------------|------------------|------------|-------------------------|--------------------------|--|
| Crosswalks - Concrete and Pavers | Square Feet | 131,120 | \$15 | \$1,966,800 | |
| Sidewalks | Square Feet | 23,170,764 | \$10 | \$231,707,640 | |
| ADA Ramps | Each | 15,141 | \$3,000 | \$45,423,000 | |
| Signals - Signalized Intersections | Each | 392 | \$300,000 | \$117,600,000 | |
| Pavement Markings - Linear | Linear Feet | 1,982,477 | \$0.5 | \$991,239 | |
| Street Signs | Each | 38,603 | \$200 | \$7,720,600 | |
| Roadway - Concrete | Lane Miles | 273 | \$1,250,000 | \$341,250,000 | |
| Roadway - Asphalt | Lane Miles | 1,567 | \$750,000 | \$1,175,250,000 | |
| Bridges | Each | 23 | \$7,000,000 | \$161,000,000 | |
| | | | Grand Total | \$2,082,909,279 | |

Based on the City's existing depreciation statements, the original value of existing infrastructure is estimated at \$457,155,385. The total original value including interest on existing debt services is \$464,021,083.

TABLE 4.4: ORIGINAL VALUATION OF EXISTING FACILITIES

| <u></u> | |
|---|---------------|
| Original Value (2019 Depreciation Statements) | \$457,155,385 |
| Plus Interest | \$6,865,697 |
| Total Original Value | \$464,021,083 |
| Source: SLC Engineering, SLC Finance, LYRB | |

Manner of Financing Existing Public Facilities

The City has several outstanding bonds. This analysis includes debt and interest costs related to bonding issued for the construction of transportation facilities. The City issued the Series 2012A Sales Tax Revenue Bonds and the Series 2014 Motor Fuel Bonds to finance the construction and improvement of various City roads and infrastructure. The interest associated with these bonds is included in the determination of existing system valuation, as shown in **TABLE 4.4**.

General obligation bonds issued by the City are excluded from this analysis, since the City levies a property tax on the assessed value of existing and future development to pay the principal and interest on these bonds. It is anticipated that new development will contribute to the repayment of these bonds through the property tax levy.

LEVEL OF SERVICE ANALYSIS

In previous IFFP iterations, the City used vehicle LOS to evaluate the impact of growth on the transportation system. That policy structure does not support the City's goals to increase multimodal options and reduce drive alone trips, because measurable "system improvements" would only result in improved vehicle LOS.

Another means of identifying deficiencies was applied based on existing system value, which has been used in similar evaluations in other mature, urban cities. For example, in Portland, Oregon and Oakland, California an existing system value was determined based on the valuation of transportation infrastructure already in place and helped to establish a maximum cost per trip that could be charged in each city's impact fee program. Existing system facilities were acquired and developed to meet the needs of existing system users; a proportionate level of future investment per person trip is needed to maintain the current LOS. Any additional capacity investments up to this base LOS cost per trip, are therefore justified to equitably recover capacity costs from future system users.

As described in the Existing Facility Inventory section, the total original value of existing infrastructure including interest on existing debt services is \$464,021,083. The replacement value is estimated at over \$2 billion, with approximately \$500 million considered system improvements (assuming 25 percent is considered system improvements based on a GIS analysis of existing centerline miles of roadways designated as city arterials or collectors compared to total City centerline miles). This total existing system value in relation to the 2019 PM peak hour vehicle trips (which amount to 365,663) sets the current LOS cost per trip at \$1,419 per PM peak hour vehicle trip, which is higher than the proposed cost per trip identified in this analysis. Therefore, the impact fees proposed in this analysis do not increase the LOS above what is currently provided.

EXCESS CAPACITY

As stated above, the City's existing depreciation statements indicate that the original value of existing infrastructure including interest on existing debt services is \$464,021,083. It is anticipated that new development will benefit from the existing transportation network constructed within the Service Area. The Impact Fee Act allows for the inclusion of system improvements when determining impact fees. Typically, arterials and collector roadways are considered system improvements, with local roadways considered project or neighborhood improvements. A GIS analysis of existing roadways produced a total of 155.2 centerline miles of roadways designated as city arterials or collectors, with a total of 623.2 total City centerline miles designated as arterial, collector or local. The ratio of system improvements to the total is 25 percent. Therefore, 25 percent (or \$115,576,169) of the existing value is included in this analysis as impact fee eligible.

The determination of a buy-in component related to existing infrastructure is further refined based on the proportionate trips generated within the IFFP planning horizon, as it is anticipated that the existing system will benefit both existing and new development. Approximately 11 percent of the total demand on the system will occur within the IFFP planning horizon. As a result, \$12,672,942 of the total original system cost is included in this analysis.

PROJECT ELIGIBILITY

The transportation impact fees are designed to support the principal modes of travel in a multi-modal system. However, impact fees cannot be used to pay the costs of addressing maintenance or existing LOS deficiencies. When preparing the IFFP Transportation Project List, the City used the following criteria to initially identify the transportation projects that are eligible:

PROJECT ELIGIBILITY - STEP 1

- Froject is in an adopted City plan, for example:
 - Transportation Master Plan;
 - Transit Master Plan;
 - Bike and Pedestrian Master Plan:
 - Capital Improvement Program;
 - Engineering 6-year Work Program
- Project adds or enhances capacity to the transportation system.
- Froject is designed to serve additional population and or employment over the next ten years.
- Project is not entirely a preventive maintenance project.

PROJECT ELIGIBILITY - STEP 2

After establishing an initial IFFP Transportation Project List, the City applied two important adjustments to the eligible project cost based on 1) the nature of the project, and 2) the travel market benefiting from the project.

Regarding the nature of the project, it is acknowledged that roadway corridor projects may include eligible (capacity enhancements) and ineligible components (pavement maintenance and repair). The portion of projects addressing existing deficiencies were subtracted from eligible costs; this included removing the portions of project costs earmarked for pavement preservation.

The next step was to determine to portion of project costs associated with growth in the City. However, not all the growth comes from Salt Lake City development – there is a portion of growth that comes from surrounding jurisdictions. The City does not have the authority to charge growth in neighboring jurisdictions for their share of building new transportation infrastructure. To account for this legal limitation, adjustments were made for trips that pass-through Salt Lake City or only have one end of the trip starting or ending in the City. Since a substantial share of traffic on some Salt Lake City roads is generated by growth outside of the City, sources other than impact fees would have to pay the cost to accommodate growth outside of Salt Lake City.

To calculate the share of trip growth associated with SLC and non-SLC development the Wasatch Front Regional Council (WFRC) travel model was used. A "select-link" analysis method provides estimates of origin and destination of trips that use a specific transportation facility and determine the portion of trips relating to outside growth. Depending on the location, six percent to 42 percent of trips are related to outside growth.

See APPENDIX C for detail of project eligibility for individual projects.

FUTURE CAPITAL FACILITIES ANALYSIS

The City has identified the growth-related projects needed within the next ten years. Capital projects related to curing existing deficiencies were not included in the calculation of the impact fees. Total future projects applicable to new development are shown below.

TABLE 4.5 illustrates the estimated cost of future capital improvements within the Service Area, as identified in the IFFP. The total cost related to growth is \$12.675,000. A detail of the proposed capital improvements can be found in **Appendix C**.

TABLE 4.5: SUMMARY OF FUTURE SYSTEM IMPROVEMENTS WITHIN IFFP PLANNING HORIZON

| | TOTAL | 2019-2029 IFFP | PORTION OF PROGRAMS FUNDED BY IMPACT FEES |
|------------------------|---------------|----------------|---|
| Engineering Program | \$135,399,768 | \$10,301,000 | 8% |
| Transportation Program | \$22,265,000 | \$2,374,000 | 11% |
| Combined Total | \$157,664,768 | \$12,675,000 | 8% |

SYSTEM VS. PROJECT IMPROVEMENTS

System improvements are defined as existing and future public facilities designed to provide services to service areas within the community at large.⁵ Project improvements are improvements and facilities that are planned and designed to provide service for a specific development (resulting from a development activity) and considered necessary for the use and convenience of the occupants or users of that development.⁶ To the extent possible, this analysis only includes the costs of system improvements related to new growth within the proportionate share analysis.

For the purposes of this analysis, system improvements are defined as arterial and collector streets, new and upgrades to traffic signalization, and related appurtenances. Each of these facilities are designed to manage new trips (motorized and non-motorized trips) within the Service Area and to maintain the existing LOS.

FINANCING STRATEGY AND CONSIDERATION OF ALL REVENUE SOURCES

The IFFP must also include a consideration of all revenue sources, including impact fees and the dedication of system improvements, which may be used to finance system improvements. In conjunction with this revenue analysis, there must be a determination that impact fees are necessary to achieve an equitable allocation of the costs of the new facilities between the new and existing users.

In considering the funding of future facilities, the IFFP has identified the portion of each project that is intended to be funded by the City, as well as funding sources from other government agencies. The cost applied to the City includes growth and non-growth-

^{5 11-36}a-102(21)

^{6 11-36}a-102(14)

^{7 11-36}a-302(2)

^{8 11-36}a-302(3)

related projects. The capital projects that will be constructed to cure the existing system deficiencies will be funded through General Fund revenues. All other capital projects within the next ten years, which are intended to serve new growth, will be funded through impact fees or on a pay-as-you-go approach. Where these revenues are not sufficient, the City may need to issue bonds or issue inter-fund loans to construct the proposed projects.

Other revenues such as grants can be used to fund these types of expenditures. The impact fees should be adjusted if grant monies are received. New development may be entitled to a reimbursement for any grants or donations received by the City for growth related projects or for developer funded IFFP projects. It is anticipated that future project improvements will be funded by the developer. These costs have been excluded from the calculation of the impact fee.

A special bond election held on November 6, 2018 gave voter authorization to the City to issue up to \$87 million in general obligation bonds to fund all or a portion of the costs of improving various streets and roads throughout the City and related infrastructure improvements. The current issuance is the first block of general obligation bonds of approximately \$20 million. The City anticipates issuing the remaining authorization within the next 5-6 years. If a portion of bond proceeds from this general obligation bond are used to fund growth-related system improvements, the impact fees may need to be reevaluated to determine if a credit is necessary within the proportionate share analysis.

SECTION 5: PROPORTIONATE SHARE ANALYSIS

PROPOSED TRANSPORTATION IMPACT FEE

The transportation impact fee utilizes the New Facility – Plan Based Approach, which is based on a defined set of capital costs specified for future development. The proportionate share analysis determines the proportionate cost assignable to new development based on the proposed capital projects and the new growth served by the proposed projects. The total growth-related capital cost is \$12,675,000. The analysis also considers the existing impact fee fund balance and applies an appropriate credit. In addition to the proposed new facilities, new development benefits from the existing transportation infrastructure already constructed. The inclusion of this buy-in, plus new facilities, would result in a maximum impact fee cost per trip as shown in **TABLE 5.1**.

TABLE 5.1: MAXIMUM IMPACT FEE COST PER TRIP

| | VALUATION | % to Growth | IMPACT FEE ALLOCATION | TRIPS | COST PER TRIP |
|-------------------------|---------------|-------------|-----------------------|--------|---------------|
| Buy-In | \$115,576,169 | 11% | \$12,672,942 | 52,209 | \$243 |
| Future Facilities | \$157,664,768 | 8% | \$12,675,000 | 52,209 | \$243 |
| Impact Fee Fund Balance | (\$2,515,087) | 100% | (\$2,515,087) | 52,209 | (\$48) |
| Professional Expense | \$29,476 | 100% | \$29,476 | 52,209 | \$1 |
| Total | \$270,755,326 | | \$22,862,332 | | \$439 |

The impact fee by land use type is illustrated in **TABLE 5.2**.

TABLE 5.2: IMPACT FEE SUMMARY BY LAND USE TYPE

| LAND USE GROUP | ITE CODE | ITE LAND USE CATEGORY | PM PEAK VEHICLE TRIP RATE ¹ | PASS BY ADJUSTMENT | NET NEW TRIPS | Unit of Measure | FEE PER UNIT LAND USE |

^{1.} ITE Trip Generation 10th Edition: 4-6 PM Peak Hour Vehicle Trip Generation Rates for the Adjacent Street Traffic (weekday 4-6PM); This Table represents only the most common uses and is NOT all-inclusive.

Land uses not identified in TABLES 5.2 will be calculated based on the non-standard impact fee formula using the most recent Institute of Traffic Engineers (ITE) Trip Generation Manual statics of PM peak hour trips between the hours of 4-6pm and appropriate adjustment factors.

Non-Standard Impact Fees

The City reserves the right under the Impact Fees Act⁹ to assess an adjusted fee that more closely matches the true impact that a specific land use will have upon the City's transportation system. This adjustment could result in a different impact fee if evidence suggests a particular user will create a different impact than what is standard for its category. The City may also decrease the impact fee if the developer can provide documentation, evidence, or other credible analysis that the proposed impact will be lower than what is proposed in this analysis.

FORMULA FOR NON-STANDARD TRANSPORTATION IMPACT FEES:

Total Units x Estimate of PM Peak Hour Trips per Unit x Adjustment Factor x \$439 = Impact Fee per Unit

⁹ 11-36a-402(1)(c)

SECTION 6: IMPACT FEE CONSIDERATIONS

EQUITY OF IMPACT FEES

Impact fees are intended to recover the costs of capital infrastructure that relate to future growth. The impact fee calculations are structured for impact fees to fund 100 percent of the growth-related facilities identified in the proportionate share analysis as presented in the impact fee analysis. Even so, there may be years that impact fee revenues cannot cover the annual growth-related expenses. In those years, other revenues, such as General Fund revenues, will be used to make up any annual deficits. Any borrowed funds are to be repaid in their entirety through impact fees.

NECESSITY OF IMPACT FEES

An entity may only impose impact fees on development activity if the entity's plan for financing system improvements establishes that impact fees are necessary to achieve parity between existing and new development. This analysis has identified the improvements to public facilities and the funding mechanisms to complete the suggested improvements. Impact fees are identified as a necessary funding mechanism to help offset the costs of new capital improvements related to new growth. In addition, alternative funding mechanisms are identified to help offset the cost of future capital improvements.

CONSIDERATION OF ALL REVENUE SOURCES

The Impact Fees Act requires the proportionate share analysis to demonstrate that impact fees paid by new development are the most equitable method of funding growth-related infrastructure.

EXPENDITURE OF IMPACT FEES

Legislation requires that impact fees should be spent or encumbered within six years after each impact fee is paid. Impact fees collected in the next six years should be spent on those projects outlined in the IFFP as growth related costs to maintain the LOS. Impact fees collected as a buy-in to existing facilities can be allocated to the General Fund to repay the City for historic investment.

GROWTH-DRIVEN EXTRAORDINARY COSTS

The City does not anticipate any extraordinary costs necessary to provide services to future development.

SUMMARY OF TIME PRICE DIFFERENTIAL

The Impact Fees Act allows for the inclusion of a time price differential to ensure that the future value of costs incurred at a later date are accurately calculated to include the costs of construction inflation. This analysis includes an inflation component to reflect the future cost of facilities. The impact fee analysis should be updated regularly to account for changes in costs estimates over time.

NOTES

Project list and cost estimates from SLC Engineering. Note there are not projects listed for FY 2026-2029. Costs do not account for inflation. Eligibility estimates from Fehr & Peers

- 1. Based on Select Link analysis (travel model) to determine proportion of roadway traffic that is locally oriented within SLC.
- 2. Estimated portion of the project costs that is not maintenance related. Cost relates to necessary multi-modal appurtenances under the City's Complete Streets ordinance. Based on historical experience, the average cost for complete streets elements comes out to about 10%.
- 3. Composite eligibility = (Eligibility based on Travel Demand) x (eligibility based on Project Scope)

| e Project List (2019-20 | 28) - Transportation | | | | | | | |
|-------------------------|---|---|----------------|---------------|--|---------------------------------|---------------------------------------|----------------------------|
| | PROJECT NAME | Notes | ESTIMATED COST | Inflated Cost | ELIGIBILITY (TRAVEL DEMAND ATTRIBUTABLE TO SLC)4 | ELIGIBILITY (SCOPE OF PROJECT)5 | COMPOSITE ELIGIBILITY ⁶ | ELIGIBLE PROJECT AMOUNT |
| 2019 | Intersection upgrades | Upgrading key intersections to improve traffic flow and safety: roundabouts, new or upgraded traffic signals, etc. The 900 South/1100 East roundabout will cost about \$500k. New traffic signals at one intersection costs about \$250k. | \$6,000,000 | \$6,000,000 | 75% | 14% | 10% | \$629,467 |
| 2019 | Radar units for traffic signals | Increase usable capacity of intersections through improved technology. Radar units cost about \$30k per intersection, allowing for installation on 150 intersections | \$4,500,000 | \$4,500,000 | 75% | 14% | 10% | \$472,100 |
| 2019 | Bus stops | Under the City's Complete Streets ordinance, these are necessary appurtenances within the street right of way. A new ADA compliant Busstop costs about \$15k-20k per stop, including flatwork and shelter. This money will allow us to build 25-30 bus stops over a 10-year period. | \$500,000 | \$500,000 | 75% | 14% | 10% | \$52,456 |
| 2019 | 600 North safety enhancements | Improving safety for walking and biking within street right-of-way. "Life on State" pedestrian safety enhancements are estimated to cost approximately \$750,000. | \$750,000 | \$750,000 | 75% | 14% | 10% | \$78,683 |
| 2019 | 9-Line | Portion of path within the street right-of-way. The Cost estimate to add the central portion of the 9-Line onto the street reconstruction project came in at \$5.3 M. We received a County grant for \$4.3 M. \$1.1 M will fill that gap, plus a small contingency. | \$1,100,000 | \$1,100,000 | 100% | 14% | 14% | \$154,000 |
| 2019 | Ongoing bike and pedestrian safety enhancements | \$600k/year for improving safety for walking and bilking within street right- of-way. HAWK Beacons cost \$150k, RRFBs are about \$12k, bulb outs and median refuge, istands are \$20k-40k, raised crosswalks are about \$8k. The average cost for major enhancements at a crosswalk come in around \$100k per crossing, allowing up to 6 crosswalk projects per year for 10 years. | \$6,000,000 | \$6,000,000 | 75% | 14% | 10% | \$629,467 |
| 2019 | Folsom Trail | Supplemental funding for Folsom Trail needed to secure right-of-way to address gap in pathway alignment. | \$3,415,000 | \$3,415,000 | 75% | 14% | 10% | \$358,271 |
| | TOTAL | | \$22,265,000 | \$22,265,000 | | | | \$2,374,444 |

NOTES

Project list and cost estimates from SLC Transportation. Costs do not account for inflation.

Eligibility estimates from Fehr & Peers

- 4. Based on Select Link analysis (travel model) to determine proportion of roadway traffic that is locally oriented within SLC. Since projects are not location specific, eligibility estimated based on average of corridor projects.
- 5. Estimated based on growth in peak hour trips (2019-2029).
- 6. Composite eligibility = (eligibility based on Travel Demand) x (eligibility based on Project Scope)
