

South Temple Sewer Upsizing Project

March 2025 Project Update

The Salt Lake City Department of Public Utilities (SLCDPU) is upsizing a sewer main along the north side of South Temple Street, from approximately I Street to L Street and from M Street to Virginia Street.

Schedule

Construction is anticipated to begin as early as March 31, 2025, and be completed by October 2025. Work will occur in segments, starting near I Street and progressing east. The segment from I Street to L Street will be under construction throughout April and May 2025.

Project Purpose

The existing sewer main is not expected to accommodate projected increases in flow due to growth. Upsizing the sewer main is necessary to ensure proper function for future demands.

See reverse for detailed information on Phase 1

What to Expect During Construction

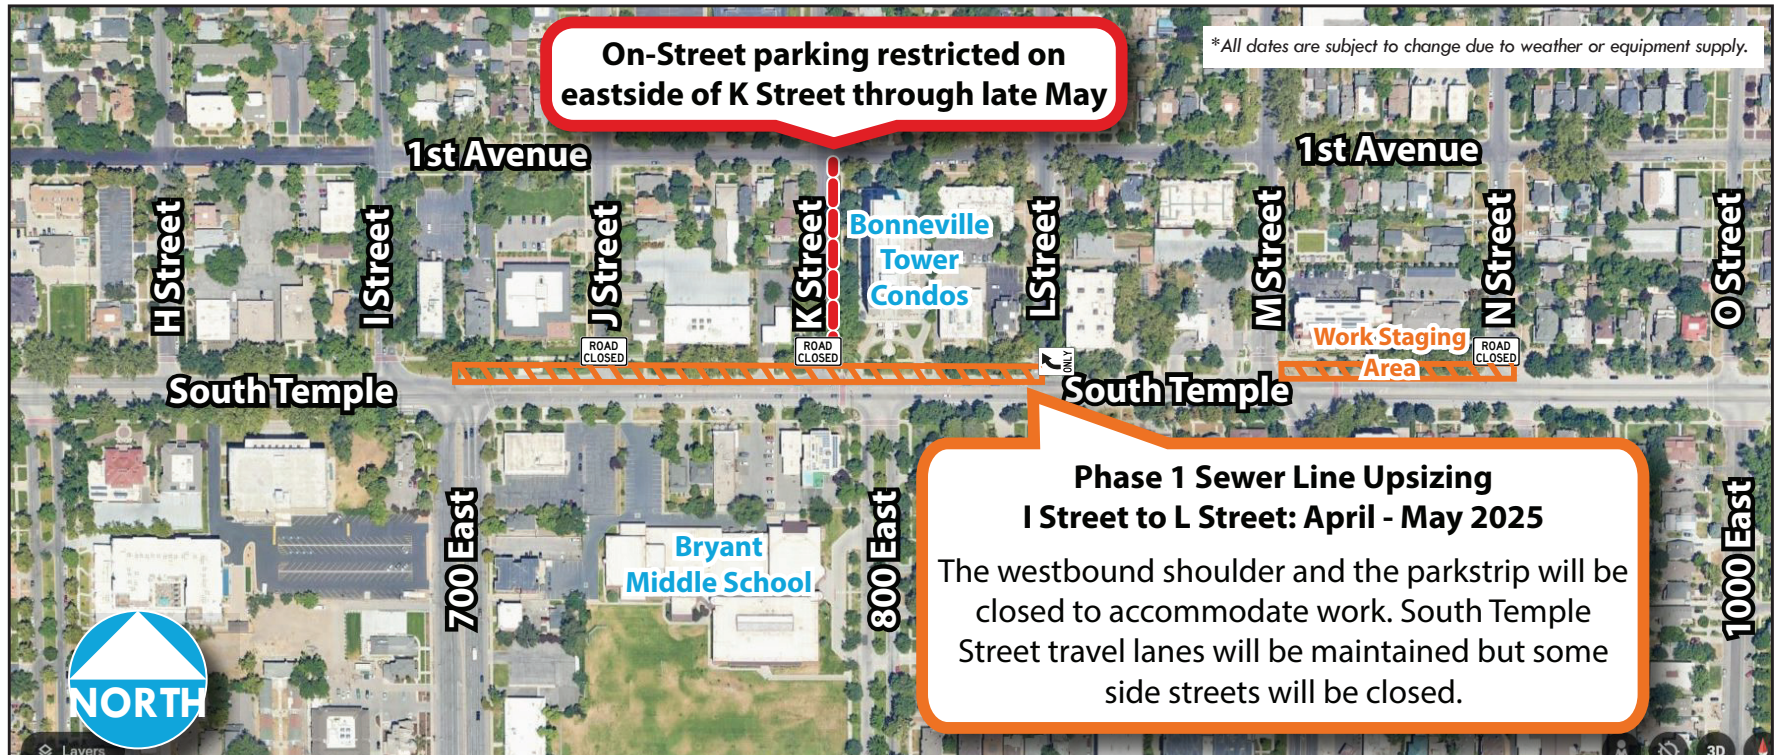

- Construction will take place Monday through Friday from 7 a.m. to 7 p.m., with occasional night or weekend work as needed.
- Closure of the westbound shoulder with possible lane closures and lane shifting. Some side streets will also be closed to accommodate work.
- Pedestrian and bicycle route detours.
- Sewer bypass pumping will be in place.
- Sewer lateral clean outs will be installed on some properties, and lateral connections will be reconnected to the sewer main.
- Temporary driveway access interruptions and sidewalk closures. Residents and businesses will be notified 48-72 hours prior to any driveway access interruptions.
- Tree protection fencing and strategic excavation methods will be in place to minimize impact to the trees in the parkstrip.
- Increased noise, vibrations, dust, and truck traffic.

South Temple Sewer Upsizing Project Phase I Project Update: I Street - L Street

Phase I: I Street to L Street

Phase I construction between I Street and L Street is anticipated to begin as early as **March 31, 2025** and be completed by late May 2025.

To accommodate future flows, the sewer main must be upsized. The contractor will use an innovative trenchless method to rehabilitate the pipe, minimizing disruption to the area. Crews will access the sewer main at manholes, pulling equipment through to burst the old pipe while simultaneously installing a new one. This technique also reduces the need for sewer service interruptions by using an above-ground temporary bypass pipe.

Construction will take place Monday through Friday from 7 a.m. to 7 p.m., with occasional night or weekend work as needed.

Traffic Impacts: Drivers should expect westbound shoulder closures and side street closures. Parking on the eastside of K Street will be restricted.

Pedestrian and Bicycle Impacts: Sidewalk access will be maintained except for brief periods (approx. 1 day) when crews are reconnecting sewer laterals. With shoulder closures, the bike lane will be closed.

Driveway Impacts: Anticipate temporary driveway access interruptions for approximately 3-4 hours. Residents and businesses will be notified 48-72 hours prior to any driveway access interruptions.

Tree Protection: Salt Lake City values the beautiful trees along South Temple and wants to keep those trees for years to come. Protection fencing and strategic excavation methods will be used to minimize impact to trees.
